

MSCI International Quality ETF (QXUS)

▶ JANUARY 31, 2015

Fund Description

The Market Vectors MSCI International Quality ETF seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the MSCI ACWI ex USA Quality Index. The Index aims to capture the performance of quality growth stocks selected from the Parent Index, MSCI ACWI ex USA Index, by identifying stocks with high quality scores based on three main fundamental variables: high return on equity, stable year-over-year earnings growth and low financial leverage.

Index returns assume the reinvestment of all income and do not reflect any management fees or brokerage expenses associated with Fund returns. Returns for actual Fund investors may differ from what is shown because of differences in timing, the amount invested and fees and expenses. You cannot invest directly in an Index.

The performance data quoted represents past performance. Past performance is not a guarantee of future results. Performance information for the Fund reflects temporary waivers of expenses and/or fees. Had the Fund incurred all expenses, investment returns would have been reduced. Investment return and value of the shares of the Fund will fluctuate so that an investor's shares, when sold, may be worth more or less than their original cost. Performance may be lower or higher than performance data quoted. Fund returns reflect dividends and capital gains distributions. Net asset value (NAV) per share is calculated by subtracting total liabilities from the total assets, then dividing by the number of shares outstanding. Share price is the last price at which shares were traded on the Fund's primary listing exchange. Performance current to the most recent month end is available by calling 888.MKT.VCTR or by visiting marketvectorsetfs.com.

These are not recommendations to buy or sell any security.

Averages are market weighted. Price/Book Ratio is the price of a security divided by the book value per share of the security. Price/Earnings Ratio is the price of a security divided by the last twelve months earnings per share of the security. Market Capitalization of an individual, publicly traded company is calculated by multiplying the company's stock price by the total number of its shares outstanding. 30-Day SEC Yield is a standard calculation developed by the Securities and Exchange Commission that allows for fairer comparisons among funds. It is based on the most recent 30-day period and reflects the investment income earned after deducting a fund's expenses for the period.

An investment in the Fund may be subject to elevated risks which include, among others, those associated with investments in foreign securities, particularly emerging markets issuers, which include, among others, expropriation, confiscatory taxation, issues with repatriation of investment income, limitations of foreign ownership, political instability, armed conflict, and social instability. The Fund is subject to risks associated with companies that have medium capitalizations. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries, so the Fund may be subject to greater volatility than a more diversified investment.

"Quality" is a measure of certain historical variables used by the Index Provider and is not intended to imply a judgment about the future performance of any Index constituent or the Index as a whole. The funds or securities referred to herein are not sponsored, endorsed, or promoted by MSCI, and MSCI bears no liability with respect to any such funds or securities or any index on which such funds or securities are based. The Fund's prospectus contains a more detailed description of the limited relationship MSCI has with Van Eck Securities Corporation and any related funds.
