Objectives and Investment Policy

Objectives and Investment Policy

The Sub-Fund aims to generate capital growth over the long term.

The investment policy of the Sub-Fund is to invest substantially all of its assets into the S-share class of Lombard Odier Funds – World Gold Expertise (the "Master Fund"), a Luxembourg fund which is regulated by the Luxembourg supervisory authority, the Commission de Surveillance du Secteur Financier, and managed by Van Eck Associates Corporation. As a result, the investment returns of the Sub-Fund will be similar to those of the Master Fund.

The Master Fund mainly invests in shares of companies active in the gold mining, precious metals, and precious stones industries to benefit from the growth and scarcity of future gold reserves.

In selecting the individual stocks, the investment manager of the Master Fund is guided by its own fundamental assessment of companies. It also relies on gold industry analysis. The result is a concentrated portfolio made up of shares in approximately 50 to 70 different companies, including companies with small, medium, and large capitalizations.

Risk and Reward Profile

What does it mean?

The risk and reward indicator is a measure of risk based on the past performance and simulated past performance of the Sub-Fund.

The risk and reward indicator is calculated using historical and simulated historical data. Historical data may not be a reliable indication for the future. Therefore the risk classification may change over time. Even if the Sub-Fund is in the lowest risk category, it does not mean it is risk free or that capital is guaranteed or protected.

Why is this Sub-Fund in this category?

The Sub-Fund is rated 7 due to the nature of its investments. Specifically, the Master Fund's investments are concentrated in shares of companies active in the fields of exploration, extraction, processing, production, and marketing in the sectors of gold mining (no less than two-thirds of the Master Fund's assets), other precious metals and precious stones.

Are there any other particular risks?

The following risks can be materially relevant but are not necessarily adequately captured by the synthetic risk indicator and may cause additional loss:

Through its investment in the Master Fund the Sub-Fund is exposed to gold securities which are cyclical in nature. Investments in gold securities can be significantly affected by international economic, monetary and political developments. Investments in gold securities may decline in value due to developments specific to the gold industry. Again, gold prices can swing sharply in response to cyclical economic conditions. For more information about risk, see the "Risk Factors" section in the prospectus, available on www.vaneck.com.
