Key Risks

Equity Market Risk: The value of the securities held by a Moat ETF may fall suddenly and unpredictably due to general market and economic conditions in markets in which issuers or securities held by the funds are active.

Concentration Risk: Increases in interest rates have a significant impact on the value of fixed-income securities issued by governments and companies. Potential or actual downgrades in credit ratings can also impact prices. This is another risk factor of a Multi-Asset ETF.

Foreign Currency Risk: Because all or a portion of a Moat ETF are being invested in securities denominated in foreign currencies, the fund's exposure to foreign currencies and changes in the value of foreign currencies versus the Base Currency may result in reduced returns for the funds, and the value of certain foreign currencies may be subject to a high degree of fluctuation.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on www.vaneck.com.
