INVESTMENT INSIGHTS

*All-access, Flexible Approach to Emerging Markets*

Second Quarter 2015
Please note that the information herein represents the opinion of the portfolio manager and these opinions may change at any time and from time to time and portfolio managers of other investment strategies may take an opposite opinion than those stated herein. Not intended to be a forecast of future events, a guarantee of future results or investment advice. Current market conditions may not continue.

This material does not constitute an offer to sell or solicitation to buy any security, including shares of any Fund. An offer or solicitation will be made only through a Fund’s prospectus or summary prospectus and will be subject to the terms and conditions contained. This material and the information provided herein are not directed at or intended for distribution to any person (or entity) who is a citizen or resident of (or located or established in) any jurisdiction where the distribution of these materials and/or the purchase or sale of interests of a Fund would be contrary to applicable law or regulation or would subject a Fund to any registration or licensing requirement in such jurisdiction. Persons who wish to review this material are required to inform themselves about and to observe any legal or regulatory restrictions which may affect their eligibility to make an investment in a Fund. Professional advice should be sought in cases of doubt.

The information herein reflects prevailing market conditions and our judgments as of the date of this document, which are subject to change. In preparing this document, we have relied upon and assumed, without independent verification, the accuracy and completeness of all information available from public sources. Opinions and estimates may be changed without notice and involve a number of assumptions which may not prove valid. There is no guarantee that any forecasts or opinions in this material will be realized. Past performance is not a guarantee or a reliable indicator of future results. All investments contain risk and may lose value. This information should not be construed as investment advice. This information should not be construed as sales or marketing material or an offer or solicitation for the purchase or sale of any financial instrument, product or service sponsored by Van Eck Associates Corporation or its affiliates.

Van Eck Global offers investment products that invest in the asset classes described in this material.

Investments in foreign securities involve a greater degree of risk including currency fluctuations, economic instability and political risk. Changes in currency rates and differences in accounting and taxation policies outside the U.S. can raise or lower returns. Investing in emerging markets, of which frontier markets is a subset, involve a heightened degree of risk, including smaller sized markets, less liquid markets and other risks associated with less established legal, regulatory, and business infrastructures to support securities markets. Due to these factors and others, the risks associated with emerging markets are increased in emerging markets.

Data from third party sources are deemed to be accurate, however, they have not been independently verified, validated or audited. There is no guarantee as to their accuracy. Any securities/portfolio holdings mentioned throughout the presentation are shown for illustrative purposes only and should not be interpreted as recommendations to buy or sell.

All indices listed are unmanaged indices and include the reinvestment of all dividends, but do not reflect the payment of transaction costs, advisory fees or expenses that are associated with an investment in the Fund. An index’s performance is not indicative of the Fund’s performance. Indices are not securities in which investments can be made. The MSCI EM Index is composed of companies representative of the market structure of 23 emerging market countries in Europe, Latin America, and the Pacific Basin and excludes closed markets and those shares in otherwise free markets that are not purchasable by foreigners. The MSCI Emerging Markets Small Cap Index includes small cap representation across 23 Emerging Markets countries. With 1,802 constituents, the index covers approximately 14% of the free float-adjusted market capitalization in each country. The small cap segment tends to capture more local economic and sector characteristics relative to larger Emerging Markets capitalization segments. The MSCI Emerging Markets Investable Market Index (IMI) captures large, mid and small cap representation across 23 Emerging Markets (EM) countries. With 2,638 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in each country. The S&P 500® Index consists of 500 widely held common stocks covering industrial, utility, financial and transportation sectors.

At Van Eck Global, we believe that persistent, long-term growth opportunities exist in emerging markets (EM). Accessing these opportunities can be challenging, as many are poorly captured by widely used benchmark indices. In the following presentation, we will explore the following topics:

<table>
<thead>
<tr>
<th>Topic</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>I. Flexibility – Accessing the full opportunity set</td>
<td>4</td>
</tr>
<tr>
<td>II. Idiosyncrasy – Using an active and selective approach</td>
<td>11</td>
</tr>
<tr>
<td>III. Structural Growth – Understanding the concept and thesis</td>
<td>17</td>
</tr>
</tbody>
</table>
The most widely used emerging markets (EM) benchmarks do not accurately represent the complete range of investment opportunities accessible to investors across the emerging markets.

Investors tend to be concentrated in certain segments with limited exposure to the most interesting facet of the investable EM universe.

Flexibility across the market cap and geographic spectrum is key to finding the best opportunities in emerging markets.

Idiosyncrasy is rising on the macro- and company-specific level, supporting the case for an active approach with a focus on stock selection.

Structural growth represents a visible arc of persistent and sustainable growth and is often times found in companies or industries not well represented in common emerging market indices.

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time.
Flexibility
Defining the Full Emerging Markets Investable Universe

- The complete, investable emerging markets universe includes over 6,000 stocks with $19.9T total market value.
- The ability to “go anywhere” across the market cap spectrum is crucial to finding the best growth opportunities.

Emerging Markets Universe by Market Cap
By Number of Stocks

- Mega & Large Cap: 362
- Mid Cap: 1,420
- Small Cap: 4,252

Emerging Markets Equity Universe
Value by Market Cap Category (in Billions)

- Small Cap: $3,815
- Mid Cap: $6,052
- Mega & Large Cap: $10,046

Source: Van Eck Research, Bloomberg; Data as of March 2015.
Indices are unmanaged and are not securities in which investments can be made. You cannot invest in an index. Please see page 2 of this presentation for index descriptions. For illustrative purposes only. Not a forecast of future results. Market capitalization definitions: small-cap is less than or equal to $2 billion; mid-cap is greater than $2 billion and less than or equal to $10 billion; and mega and large-cap is greater than $10 billion.

For illustrative purposes only. Not a forecast of future results. Market capitalization definitions: small-cap is less than or equal to $2 billion; mid-cap is greater than $2 billion and less than or equal to $10 billion; and mega and large-cap is greater than $10 billion.
Traditional EM Indices are Not a Complete Representation of the EM Universe

- Standard emerging markets indices are not a complete representation of the opportunity set in EM
- MSCI EM Index represents a small portion of the available Emerging Markets Equity universe

Source: Van Eck Research, Bloomberg; Data as of March 2015.
Indices are unmanaged and are not securities in which investments can be made. You cannot invest in an index. Please see page 2 of this presentation for index descriptions. Market capitalization definitions: small-cap is less than or equal to $2 billion; mid-cap is greater than $2 billion and less than or equal to $10 billion; and mega and large-cap is greater than $10 billion.
Most EM Investors are Concentrated in Mega and Large Cap Stocks

- Current allocation to the EM All Cap Universe is focused on a portion of the investable universe.
- Out of every dollar invested in the top 20 EM All Cap strategies* (by assets under management), 63 cents is invested in large and mega cap stocks, 30 cents is invested in mid cap stocks, and only six cents invested in small cap stocks.

*Data provided by eVestment Alliance as of 12/31/2014. Analysis excludes cash.

Market capitalization definitions: small-cap is less than or equal to $2 billion; mid-cap is greater than $2 billion and less than or equal to $10 billion; and mega and large-cap is greater than $10 billion. For illustrative purposes only. Not a forecast of future results.
Growth Drivers Differ Across the Market Cap Spectrum

- Sector exposures differ across the market cap spectrum which supports a flexible approach to EM investment.
- Smaller cap EM companies comprise sectors that are typically more sensitive to domestic growth and less impacted by global economic factors.

Source: Bloomberg, Van Eck Research; Data as of March 2015.

Indices are unmanaged and are not securities in which investments can be made. You cannot invest in an index. Please see page 2 of this presentation for index descriptions. For illustrative purposes only. Not a forecast of future results.
Idiosyncrasy
Diverging Macro Fundamentals in EM Builds a Case for Active Management

Source: Van Eck Research; Data as of March 2015.
Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time. For illustrative purposes only. Not a forecast of future results.
Economic Growth Higher, While Estimates Have Come Down

- Analysts’ GDP and EPS estimates tend to be revised lower as the year progresses
- Focusing on structural growth can help alleviate the volatility of revised growth estimates in EM

Source: Van Eck Research, International Monetary Fund (IMF) and MSCI; Data as of November 2014.

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time. For illustrative purposes only. Not a forecast of future results.
Inefficient and Sometimes Poorly Managed Companies

- According to *The Economist*, more than 60% of businesses in Asia are controlled by either the state or by families and business houses.

- The recent scandal at Petrobras is a good example of what investors may sometimes encounter and underscores the need for professional, active management.

Sales are Valued Less in Emerging Markets

- Investors seem to value sales in emerging markets less than they do in the United States.
- Price-to-sales ratio in the United States has been consistently higher than the MSCI EM Index since 2011.

Price-to-Sales Ratio

- **Price–sales ratio, P/S ratio, or PSR, is a valuation metric for stocks. It is calculated by dividing the company’s market cap by the revenue in the most recent year; or, equivalently, dividing the per-share stock price by the per-share revenue.**

**Source:** Bloomberg, Van Eck Research; Data as of March 2015.

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time. Indices are unmanaged and are not securities in which investments can be made. You cannot invest in an index. Please see page 2 of this presentation for index descriptions. For illustrative purposes only. Not a forecast of future results.
**EM Companies Can Often Have Difficulty Protecting their Margins**

- Companies in emerging markets can be inefficient, often times resulting in a divergence of management and shareholder interests.
- Companies in emerging markets lag behind U.S. companies when it comes to protecting margins; active managers can help identify opportunities.

Structural Growth
Focus on Structural Growth

- Structural growth represents long-term, persistent, and visible growth as opposed to cyclical growth, which is often characterized by volatility and unpredictability.
- Structural growth means the ability to grow the business over time in a sustainable, organic and non-cyclical manner.
- Structural growth can be stock-specific and less affected by global events.
- In a broad sense, structural growth can be created from four factors:
  1. Fundamental imbalances between supply and demand
  2. Reforms and government policy
  3. Companies with strong business models, compounding returns, and a clear competitive advantage
  4. Cyclical industries with exceptional visibility of growth

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time.
Forms of Structural Growth

Supply and Demand Imbalance

- Demographics
- Urbanization
- Consumer

Strong Business Models

- Market Share Leaders
- Unique Products
- Structural Growth Compounding ROE and ROIC
- Proven Innovators
- Persistent Competitive Advantage

Cyclical Industries

- Financial Reform
- Supply-Side Reform
- Educational Reform
- Limiting Bureaucracy

Financial Reform

- Educational Reform
- Limiting Bureaucracy

Source: Van Eck Research; Data as of December 2014. ROE = return on equity; ROIC = return on investment capital.

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time. For illustrative purposes only. Not a forecast of future results.
Structural Growth versus Cyclical Growth

- Structural growth companies are typically characterized by long term, persistent growth. Cyclical growth companies tend to be more volatile over time with generally less predictable growth rates.

Source: Van Eck Research. All data as of December 2014.
For illustrative purposes only. Not a forecast of future results. The information above is intended to demonstrate Van Eck Global’s investment process and strategies, and the types of investment opportunities Van Eck Global may consider. Actual holdings will vary for each Van Eck Global client. The charts above provide examples of two emerging markets companies that, in our opinion, exemplify the growth types aforementioned.
Summary

*Three things to remember about this presentation:*

- **Flexibility** across the market cap and geographic spectrum is key to finding the best opportunities in emerging markets.

- **Idiosyncrasy** is rising on the macro- and company-specific level, supporting the case for an active approach with a focus on stock selection.

- **Structural growth** represents a visible arc of persistent and sustainable growth and is often times found in companies or industries not well represented in common emerging market indices.

Please note that the information herein represents the opinion of Van Eck Global and these opinions may change at any time and from time to time.
