

## Press Release

### VanEck Uranium ETF Doubles AUM in Three Months, Reaches Volume of US \$1 Billion

- The VanEck Uranium and Nuclear Technologies UCITS ETF invests in the largest and most liquid companies active in uranium mining and nuclear energy infrastructure. Investments in the uranium and nuclear energy sector involve high political, regulatory, and market risks.
- Increasing political support for nuclear power is positively impacting share prices of companies in the nuclear energy sector.

London, UK – 17 September 2025 – After crossing the US \$500 million mark in mid-June 2025, the [\*VanEck Uranium and Nuclear Technologies UCITS ETF\*](#) has now reached a fund volume of over US \$1 billion\*, doubling assets under management (AUM) in only three months. Investors should be aware that investments in companies in the uranium and nuclear technology sector are subject to significant political, regulatory, and market-specific risks.

“Governments around the world are refocusing on nuclear energy,”<sup>1</sup> explained Martijn Rozemuller, CEO of VanEck Europe. “They aim to help decarbonize power generation and strengthen energy security. In addition, nuclear energy is becoming increasingly relevant to the rapid growth of artificial intelligence.”

Nuclear energy is regarded as a reliable, low-carbon power source of electricity since nuclear plants do not emit greenhouse gases during operation.<sup>2</sup> “This new political tailwind is having an effect on the share prices of companies active in the nuclear energy sector, a trend reflected in the strong growth of the VanEck Uranium and Nuclear Technologies UCITS ETF,” said Rozemuller. Investors should note, however, that nuclear energy may not be the energy source of the future, which could entail a risk of loss.

#### ETF invests in uranium mining and nuclear energy infrastructure companies

“Research is underway today on technologies that can make nuclear energy more efficient and environmentally friendly, addressing concerns that some people have about the environmental

## Marketing Communication

and safety risks of nuclear power,” says Kamil Sudiyarov, Senior Product Manager at VanEck Europe. “The companies in our ETF portfolio may be well positioned to become leaders in this technology and exert a significant influence on the future of nuclear energy.” However, investments in nuclear energy and natural resources strongly depend on uranium demand as well as economic and political conditions, which can significantly influence the sector and fund performance.

The ETF tracks the MarketVector™ Global Uranium and Nuclear Energy Infrastructure Index, which reflects the performance of the largest and most liquid companies currently active in uranium mining and nuclear energy infrastructure.
