

Press Release

VanEck: Europe's First Quantum Computer ETF Reaches \$100 Million in AUM

- Listed in May 2025, the VanEck Quantum Computing UCITS ETF is the first ETF in Europe that allows investors to gain diversified exposure to companies engaged in quantum computer technology.
- Due to the still limited number of specialized quantum computer companies, the ETF combines pure-play companies in the quantum computer sector with other leading firms in quantum computer research and development.
- However, the long-term commercial success of this technology is still uncertain.

London, UK - 19 August 2025 – Just three months after its launch in May 2025, the [VanEck Quantum Computing UCITS ETF](#) has reached \$100 million US dollars in assets under management (AUM). As the first of its kind in Europe, the ETF provides investors with access to this pioneering technology.

"The rapid growth of our ETF shows us that investor interest in this area is strong," said Martijn Rozemuller, CEO of VanEck Europe. "The Quantum ETF offers early access to a ground breaking technology with immense economic potential across many sectors." For example, quantum computers could simulate complex molecular structures in medical research or model scenarios in logistics and machine learning in a fraction of the time. Investors should note that investments in quantum computing carry both technological and market risks.

According to McKinsey, estimates of the total market for quantum technologies could reach \$173 billion US dollars by 2040, with expected long-term annual growth of 14%–17%. While specific use cases for quantum computers are already emerging, commercial success is still uncertain and the adoption of the technology could be delayed or fail, making such investments inherently risky.

"There are still relatively few publicly listed companies that focus exclusively on quantum technologies, and it remains unclear which firms will benefit and endure in the long term," said Moritz Henkel, Product Manager at VanEck Europe. "That is why we are taking a multi-layered approach with this ETF, investing in both specialized quantum start-ups and in established companies that are already applying or developing the technology."

The VanEck Quantum Computing UCITS ETF currently invests in 30 companies worldwide. This includes so-called 'pure-play' companies that generate the majority of their revenue from quantum computer technologies or services, as well as leading firms in the research, development or application of this technology. The selection of these remaining companies is based on the number of relevant patents granted to a company in the field of quantum computing. This targeted selection process makes it possible to include disruptive pioneers such as IONQ, Rigetti, or D-Wave, alongside established technology, industrial, and financial firms such as IBM, Alphabet, Honeywell, or Bank of America, which are proactively engaging with the quantum era. Investors should take into account that the high volatility of technology stocks can lead to significant fluctuations in the value of the ETF.

ETF	VanEck Quantum Computing UCITS ETF
Index name	MarketVector™ Global Quantum Leaders Index

About VanEck:

Since its foundation in 1955, VanEck has been driven by innovation and stands for intelligent, forward-looking investment strategies. The asset manager currently manages around 137,7 billion US dollars* worldwide, including ETFs, active funds and institutional accounts.

With more than 100 ETFs globally, the investment house offers a comprehensive portfolio covering numerous sectors, asset classes and smart beta strategies. VanEck was one of the first asset managers to offer investors access to global markets. The aim was always to identify new trends and asset classes - such as gold investments (1968), emerging markets (1993) and ETFs (2006). These have shaped the entire investment industry to this day.

VanEck is headquartered in New York City and has offices worldwide, including in Frankfurt (Germany), Zurich (Switzerland), Milan (Italy), London (UK), Madrid (Spain), Amsterdam (Netherlands), Shanghai (China), and Sydney (Australia).

VanEck Quantum Computing UCITS ETF (the "ETF") is a sub-fund of VanEck UCITS ETFs plc, an open-ended variable capital umbrella investment company with limited liability between sub-funds. The ETF is registered with the Central Bank of Ireland, passively managed and tracks an equity index. The product described herein aligns to Article 6 Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector. Information on sustainability-related aspects pursuant to that regulation can be found on www.vaneck.com. Investors must consider all the fund's characteristics or objectives as detailed in the prospectus or related documents before making an investment decision.

The indicative net asset value (iNAV) of the UCITS is available on Bloomberg. For details on the regulated markets where the ETF is listed, please refer to the Trading Information section on the ETF page at www.vaneck.com. The portfolio holdings are also regularly published on the website. Investing in the ETF should be interpreted as acquiring shares of the ETF and not the underlying assets.

The MarketVector™ Global Quantum Leaders Index is the exclusive property of MarketVector Indexes GmbH (a wholly owned subsidiary of Van Eck Associates Corporation), which has contracted with Solactive AG to maintain and calculate the Index. Solactive AG uses its best efforts to ensure that the Index is calculated correctly. Irrespective of its obligations towards MarketVector Indexes GmbH ("MarketVector"), Solactive AG has no obligation to point out errors in the Index to third parties. VanEck's ETF is not sponsored, endorsed, sold or promoted by MarketVector and MarketVector makes no representation regarding the advisability of investing in the ETF. It is not possible to invest directly in an index.

Performance quoted represents past performance. Current performance may be lower or higher than average annual returns shown. Performance data for the Irish domiciled ETFs is displayed on a Net Asset Value basis, in Base Currency terms, with net income reinvested, net of fees. Returns may increase or decrease as a result of currency fluctuations. Investors must be aware that, due to market fluctuations and other factors, the performance of the ETFs may vary over time and should consider a medium/long-term perspective when evaluating the performance of ETFs.

Investing is subject to risk, including the possible loss of principal. Investors must buy and sell units of the UCITS on the secondary market via an intermediary (e.g. a broker) and cannot usually be sold directly back to the UCITS. Brokerage fees may incur. The buying price may exceed, or the selling price may be lower than the current net asset value. The Management Company may terminate the marketing of the UCITS in one or more jurisdictions.
