Performance information does not take into account the commissions and costs incurred on the issue and redemption of units. Performance information is presented net of fees, but gross of tax liabilities. Each index listed is unmanaged and the returns include the reinvestment of all dividends, but do not reflect the payment of transaction costs, fees or expenses that are associated with an investment in any fund. An index's performance is not illustrative of a Fund's performance. You cannot invest in an index.

Market Review

After six months of gains in which the gold price rose by \$175 per ounce to \$1,345, March saw some profit-taking. Gold fell to its monthly low of \$1,280 on March 7 amid near-term U.S. dollar strength. However, the gold market quickly reversed course when the U.S. Department of Labor reported non-farm payrolls increased by just 20,000, compared to median expectations of 180,000. On the same day, the European Central Bank (ECB) announced a policy reversal, offering cheap loans to banks and keeping interest rates at record lows for longer than planned. This caused recessionary fears to re-emerge as long-term treasury yields fell to 15-month lows, the yield curve inverted slightly for

the first time since 2007, and gold trended to its monthly high of \$1,324 on March 25. As the month ended, there was broad weakness among precious metals due to a sharp fall in palladium prices. There were also reports of heavy official selling from Turkey to prop up the lira ahead of local elections on March 31. Gold ended the month at \$1,292.30 for a loss of \$21.01 per ounce (down 1.6%).

After about two years without reporting any purchases, the People's Bank of China (PBOC) reported its third consecutive month of gold buying, with a February inflow of 9.95 tonnes. This suggests the Chinese are again consistent buyers, which bodes well for central bank demand in 2019.

Market Outlook

First quarter merger and acquisition (M&A) activity among the supermajors has nearly reached a conclusion. Barrick Gold (7.1% of net assets) withdrew its hostile offer for Newmont Mining (6.3% of net assets) on March 11 when the companies announced a joint venture (JV) agreement to unitize their Nevada operations. Their combined Nevada operations produce four million ounces per year and Barrick, as JV operator, estimates it will generate about \$5 billion in synergies. After years of debating such a deal, at the urging of shareholders, these two rivals hammered out a JV in just two weeks.

Investors then turned their attention to the friendly Newmont/Goldcorp merger announced in January. It stood to reason that Goldcorp (2.1% of net assets) shareholders were not entitled to the Nevada JV synergies, which did not exist at the time the deal with Newmont was announced. Again, at the urging of investors, Newmont decided to award a 2.5% special dividend to its shareholders as a partial upfront payment for future Nevada synergies. The dividend will be distributed if the Newmont/Goldcorp deal is approved by shareholders in April.

All of this supermajor M&A activity has been aimed at creating value for shareholders by combining companies, managements, and properties with the goal of mining more efficiently and generating higher returns on capital. We hope the majors, mid-tiers, and juniors are able to replicate what the supermajors have done. According to Pollitt & Co. Inc.², just four companies account for 50% of iron ore production, while it takes ten companies to account for 50% of copper production. Contrast this with gold where twenty-five companies account for 45% of production. Mining is risky business and not all of these companies have an A-team. Management risk can be mitigated by joining good managements with good properties, thereby enabling companies to optimize operations. M&A also allows smaller companies to gain the critical mass needed to efficiently access capital markets and strike better deals for materials, equipment, and services.

Successful investing involves making the right call at the right time. A great investment idea can fail if the timing is off. We have been warning of the risks of recession for several years. As such, our fund has been positioned aggressively for a stronger gold market. While gold and gold stocks have exhibited positive returns in two of the last three calendar years—driven, perhaps, by any number of the global systemic risks that currently exist—we were certainly much too early on the recession call. Two years ago we shared this chart as a compelling indicator of a coming recession. We update it here, and now find it even more compelling.

Divergence Between Sentiment and Consumption Precedes Recessions

Source: St. Louis Federal Reserve Bank, Bloomberg. Data as of March 2019.

Notice the divergence between the “hard” consumption data and the “soft” consumer confidence data ahead of each recession. Sentiment remains strong before a recession, while actual economic indicators are weakening, and this time the divergence has become more pronounced. We believe, this chart, combined with other late-cycle indicators, stock market volatility, bond market action, and central bank behavior all suggest a recession remains in the forecast and probably may occur sooner than many expect. If the economy tumbles into recession, we expect financial risks to escalate that drive gold higher.

Federal debt totals about 75% of U.S. gross domestic product (GDP) and is growing rapidly. Trillion-dollar annual deficits were first seen in the Obama administration, and now President Donald Trump’s policies will again drive deficits through the trillion-dollar mark (4.5% of GDP) beginning in 2022, according to the Congressional Budget Office (CBO). Unlike in the Obama years, we rarely hear politicians complaining about the debt level. Spending more is easy, while cutting budgets seems politically impossible in Washington. Because of this, we believe a debt crisis is imminent, although the breaking point is difficult to forecast. It may come in the next recession, or at a time when rates spike as foreign holders of U.S. Treasuries lose confidence in Washington. If cutting spending is impossible, growth is weak, and raising revenue by hiking taxes even higher is limited, then we see only two options for handling U.S. debt: default or monetization.

Some politicians have begun to prepare the nation for debt monetization. So far, no adverse consequences of the sovereign debt build-up have shown up in the financial system. Meanwhile, easy monetary and fiscal policies have not ignited inflationary pressures in consumer prices. As a result, a radical form of financial thinking has emerged called Modern Monetary Theory (MMT). Key characteristics of MMT include:

- Any country that prints its own currency can do so to pay national debts or finance deficits
- Deficits don’t matter as long as interest rates remain below GDP growth
- The natural rate of interest in a fiat currency world is 0%
- Inflation can be controlled through taxation, rate increases, and regulation of big business
- Economies should be guided by fiscal policy, i.e. government spending and taxation
- Central Bank would essentially be controlled by the Treasury

Prominent economists and financial leaders have characterized MMT as “fallacious”, “garbage”, and “just wrong”. We agree with these characterizations and suspect that those reading this

update intuitively understand why. If adopted, MMT would likely lead to currency debasement and hyper-inflation on a scale seen in Weimar Germany almost 100 years ago or in modern-day Venezuela. Bond prices might collapse with the U.S. dollar, and a financial crisis would probably ensue long before MMT is implemented in its full form.

Unfortunately, there are fewer and fewer Americans who are familiar with the level of financial risk that we currently face (including even those within government-held roles at the highest levels). Furthermore, less than half of young adults now have a positive view of capitalism. According to a Deutsche Bank report, the percentage of Americans who say reducing the budget deficit should be a top priority has shrunk from 71% in 2013 to 48% in 2019. Amid this complacency towards debt, disdain of capitalism, and changing political ideas, it is not hard to imagine MMT gaining in popularity and acceptance as the next presidential cycle unfolds.

Americans, regardless of political ideology, may find the lure of free money irresistible. In addition to purportedly taking care of our indebtedness, MMT can supposedly help pay for a progressive agenda of healthcare and employment for all, abandonment of fossil fuels, and free college tuition. What might be a more viable option? How about an investment in a reasonably valued, preexisting asset class with a proven track record as an alternative store of value and negative correlation to the U.S. dollar? For that, one need not look any further than gold and gold shares.

All company, sector, and sub-industry weightings as of 31 March 2019 unless otherwise noted.

A copy of the latest prospectus, the Key Investor Information Document, the annual report and semi-annual report, if published thereafter can be found on our website www.vaneck.com or can be obtained free of charge from the representative in Switzerland: First Independent Fund Services Ltd, Klausstrasse 33, CH-8008 Zurich, Switzerland. Swiss paying agent: Neue Helvetische Bank AG, Seefeldstrasse 215, CH-8008 Zürich; Place of performance and jurisdiction is at the registered office of the Representative.

In compliance with the relevant provisions of the UCI Law, the Feeder will at all times invest at least 85% of its assets in shares of the Master. The performance of both funds will not be equal, due in particular to costs and expenses incurred by the Feeder, hedging instruments (as applicable) and the Reference Currency of the Share Classes of the Feeder differing from that of the Master.

The portfolio information provided in this document is for illustrative purposes only and does not purport to be recommendation of an investment in, or a comprehensive statement of all of the factors or considerations which may be relevant to an investment in, the referenced securities. Presented information is based on sources and information VanEck considers trustworthy, but such information might be partially incorrect or incomplete. Information presented illustrates the investment process undertaken by the manager in respect of a certain type of investment, but may not be representative of the Lombard Odier - World Gold Expertise Fund ("LOF") past or future portfolio of investments as a whole and it should be understood that they will not of themselves be sufficient to give a clear and balanced view of the investment process undertaken by the manager or of the composition of the investment portfolio of LOF. As the case may be, further information regarding the calculation methodology and the contribution of each holding in the representative account to the overall account's performance can be obtained by LOF or the Management Company.

You can lose money by investing in the Sub-Fund. Any investment in the Sub-Fund should be part of an overall investment program, not a complete program. The Sub-Fund is subject to the risks associated with concentrating its assets in the gold industry, which can be significantly affected by international economic, monetary and political developments. The Sub-Fund's overall portfolio may decline in value due to developments specific to the gold industry. The Sub-Fund's investments in foreign securities involve risks related to adverse political and economic developments unique to a country or a region, currency fluctuations or controls, and the possibility of arbitrary action by foreign governments, or political, economic or social instability. The Sub-Fund is subject to risks associated with investments in Canadian issuers, commodities and commodity-linked derivatives, commodities and commodity-linked derivatives tax, gold-mining industry, derivatives, emerging market securities, foreign currency transactions, foreign securities, other investment companies, management, market, non-diversification, operational, regulatory, small- and medium-capitalization companies and subsidiary risks.

Please see the prospectus and key investor information document for information on these as well as other risk considerations.
