Fund Description

30 April 2026

VanEck Gold Miners UCITS ETF is a UCITS-compliant exchange-traded fund (ETF) that invests in a portfolio of equity securities. The ETF aims to provide investment returns that closely track, before fees and expenses, the performance of the MarketVector™ Global Gold Miners Index (MVGDXTX).

The MarketVector™ Global Gold Miners Index is a pure-play, global index designed to track the performance of the largest publicly traded companies worldwide that are primarily involved in gold and silver mining, including mining, royalty, and streaming activities. The index is a modified free-float market-capitalisation-weighted index and is reviewed and rebalanced on a quarterly basis using a transparent, rules-based methodology.

Further information on the index is available at www.marketvector.com

Key Risks

Risk of Investing in Gold and Silver Mining Companies: A Gold ETF will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of gold and silver ore mining companies.

Risk of Investing in Smaller Companies: The securities of smaller companies may be more volatile and less liquid than the securities of large companies. Smaller companies, when compared with larger companies, may have a shorter history of operations, fewer financial resources, less competitive strength, may have a less diversified product line, may be more susceptible to market pressure and may have a smaller market for their securities. This is one of the factors to take into account when considering an investment in a Gold Fund.

Risk of Investing in the Basic Materials Sector: Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations. This is a risk factor of a Gold ETF.

Market Risk and Volatility: The value of investments and the income from them, and therefore the value of and income from the shares can go down as well as up and an investor may not get back the amount invested. The ETFs' exposure is based on the performance of the Index securities which, in turn, is exposed to general market movements (negative as well as positive). The prices of the securities in a given Gold ETF are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on www.vaneck.com.
