

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-Q

☒ Quarterly report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the quarterly period ended June 30, 2026.

or

☐ Transition report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the transition period from _____ to _____.

Commission file number: 001-42141

VanEck Ethereum ETF
(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

86-6752793
(I.R.S. Employer
Identification No.)

c/o VanEck Digital Assets, LLC
Jonathan R. Simon, Esq.
Matthew A. Babinsky, Esq.
666 Third Avenue, 9th Floor
New York, New York 10017
(Address of principal executive offices) (Zip Code)

(212) 293-2000
(Registrant’s telephone number, including area code)

Not Applicable
(Former name, former address and former fiscal year, if changed since last report)
Securities registered or to be registered pursuant to Section 12(b) of the Act.

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Shares	ETHV	Cboe BZX Exchange, Inc.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. ☒ Yes ☐ No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). ☒ Yes ☐ No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, smaller reporting company, or an emerging growth company. See the definitions of “large accelerated filer”, “accelerated filer”, “smaller reporting company” and “emerging growth company” in Rule 12b-2 of the Exchange Act.

Large Accelerated Filer	☐	Accelerated Filer	☐
Non-Accelerated Filer	☒	Smaller Reporting Company	☒
Emerging Growth Company	☒		

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☒

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act.). ☐ Yes ☒ No

The registrant had 3,325,000 outstanding Shares as of July 31, 2026.

Net Assets – 100.00%			\$ 77,828,275

December 31, 2025			
Description	Quantity	Cost	Fair Value
Ether	53,048.87	\$ 181,475,994	\$ 157,608,454
Total Investment in ether – 100.02%			157,608,454
Liabilities in Excess of Other Assets – (0.02)%			(29,513)
Net Assets – 100.00%			\$ 157,578,941

The accompanying notes are an integral part of these financial statements.

Note 1. Organization:

VanEck Ethereum ETF (the “Trust”), a Delaware statutory trust, is an exchange-traded fund that issues common shares of beneficial interest in an ownership of the Trust (the “Shares”). The Shares are traded on the Cboe BZX Exchange, Inc. (the “Exchange”). The Trust’s investment objective is to reflect the performance of the price of ether (“ETH”) less the net operating expenses of the Trust. The Trust is managed and controlled by VanEck Digital Assets, LLC (the “Sponsor”), a wholly-owned subsidiary of Van Eck Associates Corporation (“VanEck”). The CSC Delaware Trust Company is the “Trustee” of the Trust.

Note 2. Significant Accounting Policies:

A. *Basis of Preparation and Use of Estimates*

The preparation of financial statements in conformity with U.S. generally accepted accounting principles (“GAAP”) requires management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results could differ from those estimates.

The Trust qualifies as an investment company solely for accounting purposes and not for any other purpose and follows accounting and reporting requirements of Accounting Standards Codification (“ASC”) Topic 946 Financial Services—Investment Companies (“ASC Topic 946”), but is not registered, and is not required to be registered, as an investment company under the Investment Company Act of 1940, as amended.

B. *Cash*

Cash, if any, represents cash deposits held at a major financial institution and is subject to credit risk to the extent its balance exceeds the federally insured limits. As of June 30, 2026 and December 31, 2025, the Trust did not hold cash.

C. *Investment Valuation*

The Trust values its investment in ETH and other assets and liabilities at fair value. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants on the measurement date.

The Trust identifies and determines the ETH principal market (or in the absence of a principal market, the most advantageous market) for GAAP financial statement purposes consistent with the application of fair value measurement framework in Financial Accounting Standards Board (“FASB”) ASC 820 at 11:59 p.m. EST. Under ASC 820, a principal market is the market with the greatest volume and activity level for the asset or liability. The Sponsor on behalf of the Trust will determine in its sole discretion the valuation sources and policies used to prepare the Trust’s financial statements in accordance with GAAP.

Various inputs are used in determining the fair value of assets and liabilities. Inputs may be based on independent market data or they may be internally developed. These inputs are categorized into a disclosure hierarchy consisting of three broad levels for financial reporting purposes. The three levels of the fair value hierarchy are as follows:

Level 1 – Unadjusted quoted prices in active markets for identical assets or liabilities;

Level 2 – Inputs other than quoted prices included within Level 1 that are observable for the asset or liability either directly or indirectly, including quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not considered to be active, inputs other than quoted prices that are observable for the asset or liability, and inputs that are derived principally from or corroborated by observable market data by correlation or other means; and

Level 3 – Unobservable inputs where there are little or no market activity for the asset or liability, including the Trust’s assumptions used in determining the fair value of investments.

The following is a summary of the fair value hierarchy as of June 30, 2026, and December 31, 2025:

June 30, 2026	Level 1	Level 2	Level 3	Total
Assets				
Investment in ETH	\$ 77,842,105	\$ —	\$ —	\$ 77,842,105
December 31, 2025	Level 1	Level 2	Level 3	Total
Assets				
Investment in ETH	\$ 157,608,454	\$ —	\$ —	\$ 157,608,454

The following represents the changes in quantity of ETH and the respective fair value:

	ETH	Fair Value
Beginning balance as of January 1, 2026	53,048.87	\$ 157,608,454
ETH purchased	17,551.36	40,255,482
ETH purchased in-kind	—	—
ETH sold	(21,628.30)	(49,579,386)
ETH sold in-kind	—	—
Net change in unrealized appreciation (depreciation) from investment in ETH	—	(50,016,186)
Net realized loss on investment in ETH	—	(20,426,259)
Ending balance as of June 30, 2026	48,971.93	\$ 77,842,105
	ETH	Fair Value
Beginning balance as of January 1, 2025	43,935.83	\$ 146,428,902
ETH purchased	47,219.32	172,013,256
ETH sold	(38,106.28)	(127,280,000)
Net change in unrealized appreciation (depreciation) from investment in ETH	—	(34,062,356)
Net realized gain on investment in ETH	—	508,652
Ending balance as of December 31, 2025	53,048.87	\$ 157,608,454

D. Ether

ETH transactions are accounted for on trade date. Realized gains and losses on the sale of ETH are determined based on the average cost method. Under ASC Topic 946, the average cost method is an accepted method to determine realized gains and losses on the sale of ETH. Proceeds received by the Trust from the issuance of baskets consist of ETH. Deposits of ETH are held by Gemini Trust Company, LLC (the “ETH Custodian”) and at Coinbase Custody Trust Company, LLC (the “Additional ETH Custodian”, and collectively the “ETH Custodians”), on behalf of the Trust until (i) delivered out in connection with redemptions of baskets or cash or (ii) sold by the Sponsor, which may be facilitated by the ETH Custodians, to pay fees due to the Sponsor and Trust expenses and liabilities not assumed by the Sponsor.

E. Calculation of Net Asset Value

The Trust’s net asset value (“NAV”) is calculated based on the Trust’s net asset holdings, as reconciled to the ETH Custodians’ accounts, on a market approach determined on a daily basis using the MarketVector™ Ethereum Benchmark Rate price at 4:00 pm EST. The Trust’s NAV per Share is calculated by taking the current market value of its total assets, subtracting any liabilities, and then dividing that total by the total number of outstanding Shares. The Trust Agreement gives the Sponsor the exclusive authority to determine the Trust’s NAV and the Trust’s NAV per Share, which it has delegated to the administrator.

F. *Federal Income Taxes*

The Trust is treated as a grantor trust for federal income tax purposes and, therefore, no provision for federal income taxes is required. Any interest, expenses, gains and losses are passed through to the holders of Shares of the Trust. The Sponsor has reviewed the tax positions for the periods presented and has determined that no provision for income tax is required in the Trust’s financial statements.

G. *Segment Reporting*

The Chief Financial Officer and Treasurer of the Sponsor acts as the Trust’s chief operating decision maker (“CODM”), assessing performance and making decisions about resource allocation. The CODM has determined that the Trust has a single operating segment based on the fact that the Trust’s long-term strategic asset allocation is pre-determined in accordance with the terms of its prospectus, with a defined investment strategy which is executed by the Sponsor. The financial information provided to and reviewed by the CODM is presented within the Trust’s financial statements.

H. *Interim financial statements*

The financial statements included herein were prepared without audit according to the rules and regulations of the Securities and Exchange Commission. Certain information and footnote disclosures normally included in financial statements prepared in accordance with GAAP may be omitted pursuant to such rules and regulations. The financial statements reflect, in the opinion of management, all adjustments necessary that were of a normal and recurring nature and adequate disclosures to present fairly the financial position and results of operations as of and for the periods indicated. The results of operations for the three and six months ended June 30, 2026 and 2025, are not necessarily indicative of the results to be expected for the full year or for any other period.

These financial statements should be read in conjunction with the audited financial statements and the notes thereto included in the Form 10-K previously filed with the SEC.

Note 3. Trust Expenses and Other Agreements

The Trust pays the Sponsor a unified fee (the “Sponsor Fee”) of 0.20% of average daily net assets that accrues daily and pays monthly. For the period from July 23, 2024 through July 22, 2025, the Sponsor waived the entire Sponsor Fee for the first \$1.5 billion of the Trust’s net assets. The Sponsor has agreed to pay all operating expenses (except for litigation expenses and other extraordinary expenses) from the Sponsor Fee. The Sponsor from time to time will sell ETH, which may be facilitated by one or more liquidity providers and/or the ETH Custodians, in such quantity as is necessary to permit payment of the Sponsor Fee and Trust expenses and liabilities not assumed by the Sponsor.

The Trustee fee is paid by the Sponsor and is not an expense of the Trust.

The Trust holds its ETH at the ETH Custodians, both of which are regulated third-party custodians that carry insurance (in the case of the Additional ETH Custodian, such insurance is carried by its parent, Coinbase Inc., and is intended to cover the loss of client assets held by Coinbase Inc. and its subsidiaries, including the Additional ETH Custodian) and are responsible for safekeeping of ETH owned by the Trust and holding private keys that provide access to the ETH in the Trust’s ETH account.

State Street Bank and Trust Company serves as the Trust’s administrator, transfer agent and cash custodian.

Note 4. Related Parties

The Sponsor is considered to be a related party to the Trust.

MarketVector Indexes GmbH is the index sponsor and index administrator for the MarketVector Ethereum Benchmark Rate, which is used by the Trust to determine its NAV. MarketVector Indexes GmbH is an indirectly wholly-owned subsidiary of VanEck.

Van Eck Securities Corporation, a marketing agent to the Trust, is a wholly-owned subsidiary of VanEck.

VanEck is a minority interest holder in the parent company of the ETH Custodian, representing less than 1% of its equity.

VanEck is a minority equity holder in Metatech Holdings, the parent company of Nonco LLC and holds approximately 6% of its equity. Nonco LLC is a Liquidity Provider to the Trust, and the Trust conducts its ETH purchase and sale transactions by trading directly with Liquidity Providers, including Nonco LLC.

Note 5. Capital Share Transactions

Investors can buy and sell Shares of the Trust in secondary market transactions through brokers. Shares trade on the Exchange under the ticker symbol ETHV. Shares are bought and sold throughout the trading day like other publicly traded securities.

The Trust continuously offers the Shares in baskets consisting of 25,000 Shares to authorized participants. Authorized participants pay a transaction fee for each order they place to create or redeem one or more baskets. The administrator calculates the cost to purchase (or sell in the case of a redemption order) the amount of ETH represented by the baskets being created (or redeemed); the amount of ETH represented is equal to the combined NAV of the number of Shares included in the baskets being created (or redeemed).

The Trust creates and redeems Shares, but only in one or more baskets. Baskets are only made in exchange for delivery to the Trust or the distribution by the Trust of the amount of ETH represented by the baskets being created or redeemed, the amount of which is equal to the combined NAV of the number of Shares included in the baskets being created or redeemed determined as of 4:00 p.m. EST on the day the order to create or redeem baskets is properly received. The authorized participants deliver cash or ETH to create baskets and receive cash or ETH when redeeming Shares. For a subscription in cash, an authorized participant will deliver cash to the Trust’s account at the cash custodian, which the Sponsor will then use to purchase ETH from a liquidity provider chosen by the Sponsor. For a redemption in cash, the Sponsor will arrange for the ETH represented by the basket to be sold to a liquidity provider chosen by the Sponsor and the cash proceeds distributed from the Trust’s account at the cash custodian to the authorized participant. For an “in-kind” subscription, authorized participants will deliver, or arrange for the delivery by the authorized participant’s designee of, ETH to the Trust’s account with the ETH Custodian or Additional ETH Custodian in exchange for Shares when they purchase Shares. For an “in-kind” redemption transaction with the Trust, when authorized participants redeem Shares, the Trust through the ETH Custodian or the Additional ETH Custodian, will deliver ETH to such authorized participants, or a designee thereof, in exchange for their Shares. Only authorized participants may place orders to create and redeem baskets through the transfer agent. The transfer agent will coordinate with the Trust’s ETH Custodians to facilitate settlement of the Shares and ETH.

Share and capital activity is as follows:

	Three Months Ended June 30,				Six Months Ended June 30,			
	2026		2025		2026		2025	
	Shares	Amount	Shares	Amount	Shares	Amount	Shares	Amount
Beginning of period	3,475,000	\$ 176,687,769	3,150,000	\$ 145,551,631	3,625,000	\$ 182,710,597	3,000,000	\$ 137,801,504
Shares issued	200,000	5,782,275	300,000	10,249,131	1,200,000	40,255,454	525,000	20,206,287
Shares redeemed	(325,000)	(8,952,410)	(200,000)	(4,443,289)	(1,475,000)	(49,448,417)	(275,000)	(6,650,318)
End of period	<u>3,350,000</u>	<u>\$ 173,517,634</u>	<u>3,250,000</u>	<u>\$ 151,357,473</u>	<u>3,350,000</u>	<u>\$ 173,517,634</u>	<u>3,250,000</u>	<u>\$ 151,357,473</u>

Note 6. Commitments and Contingent Liabilities

In the normal course of business, the Trust enters into contracts that contain a variety of general indemnifications. The Trust’s maximum exposure under these agreements is unknown as this would involve future claims that may be made against the Trust that have not yet occurred. However, the Sponsor believes the risk of loss under these arrangements to be remote.

Note 7. Risk

Substantially all of the Trust’s assets are holdings of ETH, which creates a concentration risk associated with fluctuations in the value of ETH due to a number of factors. Accordingly, a decline in the value of ETH will have an adverse effect on the value of the Shares of the Trust. Factors that may have the effect of causing a decline in the value of ETH include high volatility, which could have a negative impact on the performance of the Trust. ETH platforms are relatively new and may be unregulated or may be subject to regulation in a relevant jurisdiction, but may not be complying, and therefore, may be more exposed to fraud and security breaches than established, regulated exchanges for other financial assets or instruments, which could have a negative impact on the performance of the Trust. The value of the Shares depends on the development and acceptance of the ethereum network. The slowing or stopping of the development or acceptance of the ethereum network may adversely affect an investment in the Trust. The price of ETH on the ETH market has exhibited periods of extreme volatility. Digital assets such as ETH were only introduced within the past decade, and the medium-to-long term value of the Shares is subject to a number of factors relating to the capabilities and development of block-chain technologies and to the fundamental investment characteristics of digital assets that are uncertain and difficult to evaluate. The Trust is subject to risks due to its concentration of investments in a single asset class. Possible illiquid markets may exacerbate losses or increase the variability between the Trust’s NAV and its market price. The amount of ETH represented by the Shares may decline over time.

Future and current regulations by a United States or foreign government or quasi-governmental agency could have an adverse effect on an investment in the Trust. Shareholders do not have the protections associated with ownership of Shares in an investment company registered under the 1940 Act or the protections afforded by the Commodity Exchange Act. Future legal or regulatory developments may negatively affect the value of ETH or require the Trust or the Sponsor to become registered with the SEC or CFTC, which may cause the Trust to liquidate.

The Exchange on which the Shares are listed may halt trading in the Trust’s Shares, which would adversely impact a Shareholder’s ability to sell Shares. The market infrastructure of the ETH spot market could result in the absence of active authorized participants able to support the trading activity of the Trust.

Shareholders that are not authorized participants may only purchase or sell their Shares in secondary trading markets, and the conditions associated with trading in secondary markets may adversely affect Shareholders’ investment in the Shares.

Note 8. Financial Highlights

The financial highlights summarize certain per share operating information and financial ratios of net investment loss and expenses, to daily average net assets for the periods below. An individual investor’s return and ratios may vary based on the timing of capital transactions:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2026	2025	2026	2025
Net asset value per share, beginning of period	\$ 30.73	\$ 26.88	\$ 43.47	\$ 48.81
From investment operations:				
Net investment loss ^(a)	(0.01)	—	(0.03)	—
Net realized gain (loss) and change in unrealized appreciation (depreciation)				
from investments in ether ^(b)	(7.49)	9.53	(20.21)	(12.40)
Net increase (decrease) resulting from operations	(7.50)	9.53	(20.24)	(12.40)
Net asset value per share, end of period	\$ 23.23	\$ 36.41	\$ 23.23	\$ 36.41
Total return ^(c)	(24.41)%	35.45%	(46.56)%	(25.40)%
Ratios to average net assets ^(d)				
Gross expense	0.20%	0.20%	0.20%	0.20%
Net expense	0.20%	0.00%	0.20%	0.00%
Net investment loss	(0.20)%	0.00%	(0.20)%	0.00%

- (a) Net investment loss per share has been calculated based upon an average of daily shares outstanding.
- (b) The amount shown for a share outstanding throughout the period may not agree with the change in the aggregate gains and losses for the period because of the timing of sales and repurchases of the Trust’s shares in relation to fluctuating market values for the Trust.
- (c) Returns are not annualized and include adjustments required by GAAP. Returns for financial statements purposes may differ from net asset values and performance reported elsewhere by the Trust.
- (d) Annualized.

Note 9. Subsequent Event Review

The Trust has evaluated subsequent events and transactions for potential recognition or disclosure through the date the financial statements were issued and has determined that there are no material events that would require disclosure.

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

This information should be read in conjunction with the financial statements and notes to financial statements included with this Report. The discussion and analysis that follows may contain statements that relate to future events or future performance. In some cases, such forward-looking statements can be identified by terminology such as “may,” “will,” “should,” “could,” “expect,” “plan,” “anticipate,” “believe,” “estimate,” “predict,” “potential” or the negative of these terms or other comparable terminology. All statements (other than statements of historical fact) included in this Report that address activities, events or developments that may occur in the future, including such matters as changes in commodity prices and market conditions (for ETH and the Shares), the operations of the Trust, the plans of the Sponsor and references to the Trust’s future success and other similar matters are forward-looking statements. These statements are only predictions. Actual events or results may differ materially. These statements are based upon certain assumptions and analyses made by the Sponsor on the basis of its perception of historical trends, current conditions and expected future developments, as well as other factors it believes are appropriate in the circumstances. Whether or not actual results and developments will conform to the Sponsor’s expectations and predictions is subject to a number of risks and uncertainties, including the special considerations discussed in this Report, general economic, market and business conditions, changes in laws or regulations, including those concerning taxes, made by governmental authorities or regulatory bodies, and other world economic and political developments. Consequently, all the forward-looking statements made in this Report are qualified by these cautionary statements, and there can be no assurance that the actual results or developments the Sponsor anticipates will be realized or, even if substantially realized, will result in the expected consequences to, or have the expected effects on, the Trust’s operations or the value of the Shares issued by the Trust. Moreover, neither the Sponsor nor any other person assumes responsibility for the accuracy or completeness of the forward-looking statements. Neither the Trust nor the Sponsor undertakes an obligation to publicly update or conform to actual results any forward-looking statement, whether as a result of new information, future developments or otherwise, except as required by law.

Introduction

The Trust is a Delaware statutory trust. The Trust does not have directors, officers or employees. The creation and operation of the Trust has been arranged by the Sponsor. The Trust is administered by the Trust Agreement, among the Sponsor and, the Trustee. The Trust is managed and controlled by the Sponsor, a wholly-owned subsidiary of VanEck. The Sponsor is not governed by a board of directors.

The Trust’s investment objective is to reflect the performance of the price of ETH less the operating expenses of the Trust. The Trust is a passive investment vehicle that does not seek to pursue any investment strategy beyond tracking the price of ETH. The Trust does not engage in any activities designed to obtain a profit from, or ameliorate losses caused by, changes in the price of ETH.

The Trust issues and redeems Shares only in aggregations of 25,000 Shares, a Basket, or integral multiples thereof, and only in transactions with authorized participants.

Shares of the Trust trade on the Exchange under the ticker symbol “ETHV.”

Computation of Net Asset Value

The Trust’s NAV is calculated based on the Trust’s net asset holdings, as reconciled to the ETH Custodians’ accounts, on a market approach determined on a daily basis in accordance with the MarketVector™ Ethereum Benchmark Rate price at 4:00 p.m. EST. The Trust’s NAV per Share is calculated by taking the current market value of its total assets, subtracting any liabilities, and then dividing that total by the total number of outstanding Shares. The Trust Agreement gives the Sponsor the exclusive authority to determine the Trust’s NAV and the Trust’s NAV per Share, which it has delegated to the Administrator.

Liquidity

The Trust is not aware of any trends, demands, conditions or events that are reasonably likely to result in material changes to its liquidity needs. In exchange for a fee, the Sponsor has agreed to assume most of the expenses incurred by the Trust. As a result, the only ordinary expense of the Trust during the period covered by this Report was the Sponsor’s Fee, which was waived during the period. The Trust’s only source of liquidity is its sales of ETH.

Significant Accounting Policies

In preparing financial statements in conformity with GAAP, management makes estimates and assumptions that affect the reported amounts of assets, liabilities and disclosures of contingent assets and liabilities at the date of the financial statements, as well as the reported amount of revenue and expenses reported during the period. Actual results could differ from these estimates. A description of the valuation of ETH, a critical accounting policy that the Trust believes is important to understanding its results of operations and financial position, is provided in the section entitled “Computation of Net Asset Value” above. In addition, please refer to Note 2 to the Financial Statements included in this report for further discussion of the Trust’s accounting policies.

Results of Operations

The Three Months Ended June 30, 2026

The Trust’s NAV decreased from \$106,775,700 at March 31, 2026 to \$77,828,275 at June 30, 2026, a 27.11% decrease. The decrease in the Trust’s NAV resulted primarily from a decrease in the price of ETH, which decreased 24.35% from \$2,101.20 at March 31, 2026 to \$1,589.53 at June 30, 2026. The number of Shares outstanding also decreased from 3,475,000 Shares at March 31, 2026 to 3,350,000 Shares at June 30, 2026, a net result of 200,000 Shares (8 Baskets) being created and 325,000 Shares (13 Baskets) being redeemed during the three months ended June 30, 2026.

The 24.41% decrease in the NAV per Share from \$30.73 at March 31, 2026 to \$23.23 at June 30, 2026 is primarily related to the 24.35% decrease in the price of ETH during the three months ended June 30, 2026.

The NAV per Share of \$35.50 on April 17, 2026, was the highest during the three months, compared with a low during the three months of \$22.75 on June 5, 2026.

Net decrease in net assets resulting from operations for the three months ended June 30, 2026, was \$(25,777,290) resulting from the net change in unrealized appreciation (depreciation) from investment in ETH of \$(19,789,200), a net realized loss of \$(5,909,360) on ETH sold for the redemption of Shares, a net realized loss of \$(27,102) from ETH sold to pay expenses during the three months, and a net investment loss of \$51,628. Other than the Net Sponsor Fee of \$51,628, the Trust has no other expenses during the three months ended June 30, 2026.

The Six Months Ended June 30, 2026

The Trust’s NAV decreased from \$157,578,941 at December 31, 2025 to \$77,828,275 at June 30, 2026, a 50.61% decrease. The decrease in the Trust’s NAV resulted primarily from a decrease in the price of ETH, which decreased 46.50% from \$2,971.01 at December 31, 2025 to \$1,589.53 at June 30, 2026. The number of Shares outstanding also decreased from 3,625,000 Shares at December 31, 2025 to 3,350,000 Shares at June 30, 2026, a net result of 1,200,000 Shares (48 Baskets) being created and 1,475,000 Shares (59 Baskets) being redeemed during the six months ended June 30, 2026.

The 46.56% decrease in the NAV per Share from \$43.47 at December 31, 2025 to \$23.23 at June 30, 2026 is primarily related to the 46.50% decrease in the price of ETH during the six months ended June 30, 2026.

The NAV per Share of \$49.37 on January 14, 2026, was the highest during the six months, compared with a low during the six months of \$22.75 on June 5, 2026.

Net decrease in net assets resulting from operations for the six months ended June 30, 2026, was \$(70,557,703) resulting from the net change in unrealized appreciation (depreciation) on investment in ETH of \$(50,016,186), a net realized loss of \$(20,374,218) on ETH sold for the redemption of Shares, a net realized loss of \$(52,041) from ETH sold to pay expenses during the six months, and a net investment loss of \$115,528. Other than the Net Sponsor Fee of \$115,258, the Trust has no other expenses during the six months ended June 30, 2026.

Item 3. Quantitative and Qualitative Disclosures About Market Risk.

Not applicable.

Item 4. Controls and Procedures.

The duly authorized officers of the Sponsor performing functions equivalent to those a principal executive officer and principal financial officer of the Trust would perform if the Trust had any officers, with the participation of the Trustee, have evaluated the effectiveness of the Trust’s disclosure controls and procedures, and have concluded that the disclosure controls and procedures of the

Trust were effective as of the end of the period covered by this Report to provide reasonable assurance that information required to be disclosed in the reports that the Trust files or submits under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported, within the time periods specified in the applicable rules and forms, and that it is accumulated and communicated to the duly authorized officers of the Sponsor performing functions equivalent to those a principal executive officer and principal financial officer of the Trust would perform if the Trust had any officers, as appropriate to allow timely decisions regarding required disclosure.

There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures.

There were no changes in the Trust’s internal control over financial reporting that occurred during the period covered by this Report that have materially affected, or are reasonably likely to materially affect, the Trust’s internal control over financial reporting.

Part II. OTHER INFORMATION.

Item 1. Legal Proceedings.

None.

Item 1A. Risk Factors.

The trading prices of many digital assets, including ETH, have experienced extreme volatility in recent periods and may continue to do so. Extreme volatility in the future, including further declines in the trading prices of ETH, could have a material adverse effect on the value of the Shares and the Shares could lose all or substantially all of their value.

The trading prices of many digital assets, including ETH, have experienced extreme volatility in recent periods and may continue to do so. For instance, there were steep increases in the value of certain digital assets, including ETH, over the course of 2021, and multiple market observers asserted that digital assets were experiencing a “bubble.” These increases were followed by steep drawdowns throughout 2022 in digital asset trading prices, including for ETH. These episodes of rapid price appreciation followed by steep drawdowns have occurred multiple times throughout ETH’s history, including in 2017-2018, in 2021-2022, and in 2025-2026. Over the course of 2023, 2024, and the first quarter of 2025, ETH prices continued to exhibit extreme volatility. After reaching an all-time high of approximately \$4830 in August 2025, the price of ETH declined to below \$1570 in June 2026, representing a drawdown of more than 65%, and there can be no assurance that the price of ETH will not decline further. For example, ETH lost approximately 12.2% of its value according to some sources in mid-October 2025 as part of wider digital asset market turmoil, widely attributed to global trade tensions, which triggered a number of dislocations in the digital asset market (the “October 2025 Flash Crash”), including liquidations of up to \$20 billion in collateral in the form of various digital assets (including, but not limited to, ETH) securing trades (particularly perpetual futures contracts and various forms of financing transactions), along with reported service interruptions, halted orders, forced unwinding of trades, and other issues, across centralized and decentralized exchanges. Digital asset prices, including the price of ETH, declined significantly during the first half of 2026. As of the date of this report, the price of ETH remains significantly below its August 2025 all-time high, and digital asset prices continue to fluctuate significantly.

Extreme volatility may persist and the value of the Shares may significantly decline in the future without recovery. The digital asset markets may be experiencing a bubble or may experience a bubble again in the future. For example, in the first half of 2022, each of Celsius Network, Voyager Digital Ltd., and Three Arrows Capital declared bankruptcy, resulting in a loss of confidence in participants of the digital asset ecosystem and negative publicity surrounding digital assets more broadly. In November 2022, FTX Trading Ltd. (“FTX”), one of the largest digital asset exchanges by volume at the time, halted customer withdrawals amid rumors of the company’s liquidity issues and likely insolvency, which were subsequently corroborated by its CEO. Shortly thereafter, FTX’s CEO resigned and FTX and many of its affiliates filed for bankruptcy in the United States, while other affiliates have entered insolvency, liquidation, or similar proceedings around the globe, following which the U.S. Department of Justice brought criminal fraud and other charges, and the

SEC and CFTC brought civil securities and commodities fraud charges, against certain of FTX’s and its affiliates’ senior executives, including its former CEO. In addition, several other entities in the digital asset industry filed for bankruptcy following FTX’s bankruptcy filing, such as BlockFi Inc. and Genesis Global Capital, LLC (“Genesis”). In response to these events (collectively, the “2022 Events”), the digital asset markets have experienced extreme price volatility and other entities in the digital asset industry have been, and may continue to be, negatively affected, further undermining confidence in the digital asset markets. These events have also negatively impacted the liquidity of the digital asset markets as certain entities affiliated with FTX engaged in significant trading activity. If the liquidity of the digital asset markets continues to be negatively impacted by these events, digital asset prices, including ETH, may continue to experience significant volatility or price declines and confidence in the digital asset markets may be further undermined. In addition, regulatory and enforcement scrutiny has increased, including from, among others, the Department of Justice, the SEC, the CFTC, the White House and Congress, as well as state regulators and authorities, and the digital asset industry remains subject to significant attention from regulators, legislators and policymakers. These events are continuing to develop and the full facts are continuing to emerge. It is not possible to predict at this time all of the risks that they may pose to the Trust, its service providers or to the digital asset industry as a whole.

The prices for some digital assets including ETH have risen following the election of Donald Trump as president of the United States. Some expect the new administration to adopt a more constructive attitude toward the digital asset industry than prior administrations were perceived to have done and work toward providing greater regulatory clarity and certainty for emerging technologies including blockchain technology and digital assets, thereby fostering their development. Certain members of Congress have also expressed similar sentiments. To the extent market expectations about future activity by the administration or Congress lead digital assets prices and valuations to increase, there can be no assurance such expectations will be fulfilled, or that digital asset prices will rise or maintain their current levels. Some commentators have referred to this as a bubble. There can be no assurance that such a bubble does not currently exist. The failure of the administration and Congress to provide greater regulatory clarity and certainty for blockchain technology and digital assets, such as through promulgating a regulatory framework governing the issuance and operation of digital assets that lives up to industry expectations, could lead to a decline in prices for digital assets including ETH, which could cause declines in the value of the Shares and cause Shareholders to suffer losses. Moreover, there can be no assurance that political winds or market perceptions of them will not shift over time.

In addition, the Guiding and Establishing National Innovation for U.S. Stablecoins Act of 2025 (“GENIUS Act”), which establishes a federal framework for payment stablecoins, was enacted in July 2025. The Digital Asset Market Clarity Act of 2025 (the “CLARITY Act”), which is intended to establish a federal market-structure framework for certain digital assets, passed the U.S. House of Representatives in July 2025 and was advanced by the U.S. Senate Committee on Banking, Housing, and Urban Affairs in May 2026. In July 2026, Senate Republicans released updated bill text, but the CLARITY Act has not been enacted and its prospects remain uncertain. Delays in, changes to, or adverse developments relating to implementation of the GENIUS Act, enactment of the CLARITY Act or similar legislation, or other federal or state regulatory actions could negatively affect market sentiment, liquidity, trading activity, or the prices of digital assets, including ETH. Any resulting decline in the price of ETH could cause a reduction in the value of the Shares and cause Shareholders to suffer losses.

On March 6, 2025, President Trump issued an executive order for the “Establishment of the Strategic Bitcoin Reserve and United States Digital Asset Stockpile” (the “Order”). The Order requires the Secretary of the U.S. Department of Treasury to establish two offices to administer and maintain a “Strategic Bitcoin Reserve” (the “Bitcoin Reserve”) and a U.S. Digital Asset Stockpile (the “Digital Asset Stockpile”), respectively. The Bitcoin Reserve is intended to be capitalized with bitcoin forfeited as part of U.S. criminal or civil proceedings or in satisfaction of penalties imposed by executive agencies. The Order directs the Secretaries of the U.S. Treasury Department and the U.S. Department of Commerce to develop budget-neutral strategies for acquiring additional bitcoin for the Bitcoin Reserve. As established by the Order, the Bitcoin Reserve will not contain ETH, and there can be no assurance, and there is no present indication, that it would be changed to include ETH in the future. The Digital Asset Stockpile is intended to be capitalized initially with digital assets other than bitcoin forfeited as part of criminal or civil asset forfeiture proceedings, which could include ETH; however, there will be no new acquisitions of ETH as part of the Digital Asset Stockpile. While legislation has been introduced in the U.S. Senate and the U.S. House of Representatives that would direct the acquisition of one million bitcoin by the federal government over a five-year period, no similar federal legislation has been introduced that would expressly provide for acquiring ETH. Even if such legislation providing for the acquisition of ETH were to be introduced at the federal level, it could fail to pass. If now or in the future, the U.S. federal government or any state government or any instrumentality thereof does not announce ETH acquisition plans, or does announce such plans but these plans fall short of market expectations, the price of ETH may decline, which may impact Share value. Further, executive orders such as the Order are subject to change and can be reversed or overturned. The enduring existence and size of the Digital Asset Stockpile is subject to complex challenges and uncertainty that makes it difficult to evaluate its effect on the value of ETH and the Shares, now or in the future. There can be no assurance that any particular legislation will ever be introduced or passed at either the federal or state level providing for the acquisition of ETH by governmental instrumentalities.

Extreme volatility in the future, including further declines in the trading prices of ETH, could have a material adverse effect on the value of the Shares and the Shares could lose all or substantially all of their value. Furthermore, negative perception, a lack of stability and standardized regulation in the digital asset economy may reduce confidence in the digital asset economy and may result in greater volatility in the price of ETH and other digital assets, including a depreciation in value. The Trust is not actively managed and will not take any actions to take advantage, or mitigate the impacts, of volatility in the price of ETH.

A temporary or permanent “fork” of the Ethereum blockchain could adversely affect an investment in the Trust. Shareholders will not receive the benefits of any forks or airdrops.

Ethereum software is open source. Any user can download the software and participate in the Ethereum network, and no permission of a central authority or body is needed to do so. In addition, anyone can propose a modification to the Ethereum network’s source code and then propose that the Ethereum network community adopt the modification. These proposed modifications to the Ethereum network’s source code, if adopted, can lead to forks (referred to as “volitional forks” because they take place through a formal process).

In the case of volitional forks, the core developers, including those associated with or funded by the Ethereum Foundation, are able to access and alter the Ethereum network source code and, as a result, they are typically responsible for proposing quasi-official or widely publicized releases of updates and other changes to the Ethereum network’s source code called EIPs. Any user can propose an idea for modifying the Ethereum network’s source code, and the core developers are responsible for merging the proposed idea into the EIP repository on GitHub, where it formally becomes an EIP. However, core developers are not monolithic. At the protocol level, certain core developers may support a given change while others oppose it. Developers of certain Ethereum Clients may support the change and incorporate the change into an update to their particular Ethereum Consensus Client or Execution Client, while developers of other Ethereum Clients may not do so. In addition, the release of proposed updates to the Ethereum network’s source code by core developers does not guarantee that the updates will be automatically adopted. The developers of each Ethereum Client must agree to implement the EIP’s changes to the Ethereum network in the source individual for their respective client software, nodes must accept the changes made available by the developers of the Ethereum Client software they use by choosing to individually download the modified Ethereum Client software, which they will likely not do unless a critical mass of validators and users - such as DApp and smart contract developers, as well as end users of DApps and smart contracts, and anyone else who transacts on the Ethereum Blockchain or Ethereum network - support the shift as well. If no such critical mass emerges, node operators will not download the change, and the upgrades will lack adoption.

Modifications are typically introduced by core developers in the form of EIPs, and are often followed by a robust debate within the Ethereum community as to the advisability of the proposed change. Assuming the core developers at the protocol level and the developers of individual Ethereum Clients reach a broad consensus among themselves in favor of introducing the change into the respective source code they are responsible for developing and maintaining, the source code modification will be introduced and made available to download. Typically, after a modification is introduced and a substantial majority of users and validators express support, leading to node operators consenting to the modification by choosing to download it, the change is implemented at a specific block number on the Ethereum network and the network continues to operate uninterrupted on a single blockchain. However, if less than a substantial majority of core developers (whether at the protocol level or the individual Ethereum Client level), users, validators and node operators consent to the proposed modification, but the modification is nonetheless implemented by some core developers, Ethereum Clients, node operators, users and validators, and the modification is not compatible with the software prior to its modification, the consequence would be what is known as a “fork” (i.e., split) of the Ethereum network (and the Ethereum Blockchain), with one version (employed by those core developers, Ethereum Clients, node operators, validators and users who rejected the change) running the pre- modified software and the other (employed by core developers, Ethereum Clients, node operators, validators and users who chose to adopt the change) running the modified software. The effect of such a fork would be the existence of two (or more) versions of the Ethereum network running in parallel, but with each version’s ETH lacking interchangeability, and with different blockchains, transaction histories, and ownership ledgers associated with each. For example, in July 2016, Ethereum “forked” into Ethereum and a new digital asset, Ethereum Classic, as a result of the Ethereum network community’s response to a significant security breach in which an anonymous hacker exploited a smart contract running on the Ethereum network to syphon approximately \$60 million of ETH held by The DAO, a distributed autonomous organization, into a segregated account. In response to the hack, most participants in the Ethereum community elected to adopt a “fork” that effectively reversed the hack. However, a minority of users, developers, and validators continued to develop and use the original blockchain, now referred to as “Ethereum Classic” with the digital asset on that blockchain now referred to as Ether Classic, or ETC. In practice, the two networks would compete with each other for users, developers, validators, and adoption, potentially to their mutual detriment (for example, if the number of validators on each network is too small leading to security concerns, as discussed below, or if the number of users on each is reduced compared to the number of users of the single pre-fork blockchain network). Debates relating to hard forks can be contentious and hard fought among network participants, and can lead to ill will. Another possible result of a hard fork is an inherent decrease in the level of security due to significant amounts of

validating power remaining on one network or migrating instead to the new forked network. After a hard fork, it may become easier for an individual validator or validating pool’s validating power to exceed relevant thresholds of the total on either network, thereby making them both more susceptible to attack. If such a contentious hard fork were to occur on the Ethereum Blockchain in the future, it could cause the Ethereum network to lose users, validators and developers, and could cause ETH to lose value, adversely affecting the price of the Shares. The pre-fork and post-fork blockchains could compete against each other for users, validators and developer talent, to their mutual detriment.

Such a fork in the Ethereum Blockchain typically would be addressed by community-led efforts to merge the forked Ethereum Blockchains, and several prior forks have been so merged. Since the Ethereum network’s inception, modifications to the Ethereum network have generally been accepted by the majority of users, developers, and validators ensuring that the Ethereum network remains a coherent economic system and the focal point of the majority of developer activity. There is no assurance, however, that this will continue to be the case, and if it is not, then the price of ETH could be negatively affected. The original blockchain and the forked blockchain could potentially compete with each other for users, developers, and validators leading to a loss of these for the original blockchain. A fork of any kind could adversely affect an investment in the Trust or the ability of the Trust to operate and the Trust’s procedures may be inadequate to address the effects of a fork.

A future fork in the Ethereum network could adversely affect the value of the Shares or the ability of the Trust to operate. As with any change to software code, software upgrades and other changes to the source code or protocols of the Ethereum network in connection with a hard fork could fail to work as intended or could introduce bugs, coding defects, unanticipated or undiscovered problems, flaws, or security risks, create problematic economic incentives which incentivize behavior which has a negative effect on the Ethereum network’s users, validators, or the Ethereum network as a whole, or otherwise adversely affect, the speed, security, usability, or value of the Ethereum network or ETH. A hard fork could also adversely affect the price of ETH at the time of announcement or adoption or subsequently. After the hard fork, it is possible the aggregate price of the two versions of the digital asset running in parallel would be less than the price of the digital asset immediately prior to the fork. If a hard fork caused operational problems for either post-fork network or blockchain, the digital assets associated with the affected network could lose some or all of their value, or cause users and validators to abandon the Ethereum network in favor of other competing digital asset networks and blockchains. Furthermore, while the Sponsor will, as permitted by the terms of the Trust Agreement, determine which network is generally accepted as the Ethereum network and should therefore be considered the appropriate network for the Trust’s purposes, and there is no guarantee that the Sponsor will choose the network and the associated digital asset that is ultimately the most valuable fork. Any of these events could therefore adversely impact the value of the Shares.

On March 13, 2024, the Ethereum network underwent a volitional fork called “Dencun” implementing a series of EIPs. For example, EIP 4844 is intended to improve the economics of Layer 2s by reducing transaction fees for Layer 2s who batch transactions executed on the Layer 2s and upload them as a batch (or as a single proof) onto the main Layer 1 Ethereum network. Proponents hope it will achieve this objective by, among other things, providing Layer 2 scaling solutions a designated storage space on the Layer 1 Ethereum network, called Binary Large Objects (“blobs”), which attach large data chunks to transactions on the Layer 1 Ethereum network and are recorded on the Layer 1 Ethereum network’s blockchain. The data in blobs become inaccessible on the Layer 1 Ethereum network after a temporary period of time, thereby reducing demands for storage space on the Layer 1 Ethereum network, unlike the previous method of storing batched data from Layer 2s, which caused the data to remain permanently on the Layer 1 Ethereum network. This is expected by proponents of Dencun to reduce the cost of storing the data on the Ethereum Layer 1 network permanently, making Layer 2s more cost-efficient to operate and potentially more effective as a scaling solution. Immediately following the upgrade, some Layer 2s reportedly experienced reduced transaction fees when batching transactions to the main Layer 1 Ethereum network, which in turn lowered the transaction costs for executing transactions on such Layer 2s, but this also is believed to have resulted in ETH prices (as the native asset of the Layer 1 Ethereum network) dropping as well due, in part, to the reduced demand for ETH to pay the transaction costs of recording data on the Layer 1 Ethereum network. Decreased ETH prices could have an adverse effect on the value of the Shares. Additionally, some Layer 2s, such as Blast, reportedly experienced outages and other disruptions in the aftermath of the Dencun upgrade, which in the case of Blast halted block production on the Blast Layer 2 blockchain for a period of time, though it was reportedly restored shortly thereafter. As with any change to software code, volitional forks such as Dencun or other such forks could introduce bugs, coding defects, unanticipated or undiscovered problems, flaws, security risks, problematic incentive structures, or otherwise fail to work as intended or achieve the expected benefits that proponents hope for in the short term or the long term, which could also have an adverse effect on adoption of the Ethereum network and the value of ETH, and therefore the Shares.

In September 2022, the Ethereum network transitioned to a proof-of-stake consensus model, in an upgrade referred to as the “Merge.” Following the Merge, a hard fork of the Ethereum network occurred, as a small number of Ethereum validators and network participants planned to maintain the proof-of-work consensus mechanism that was removed as part of the Merge. This version of the network, which is not backwards-compatible with the Ethereum Layer 1 blockchain, is considered a forked branch and was rebranded as “Ethereum Proof-of-Work.” Unlike proof-of-work, in which validators expend computational resources to compete to validate transactions and are

rewarded ETH in proportion to the amount of computational resources expended, in proof-of-stake, miners (also called validators) risk or “stake” ETH to compete to be randomly selected to validate transactions and are rewarded ETH in accordance with an algorithm calibrated according to the number of validators who have staked ETH. Any malicious activity by a miner, such as mining multiple blocks, disagreeing with the eventual consensus or otherwise violating protocol rules, results in the forfeiture or slashing (as defined below) of a portion of the staked ETH. Proof-of-stake is viewed as more energy efficient and scalable than proof-of-work. There can be no assurance that these or other benefits will be realized, and failure to achieve these intended benefits could cause ETH to lose some or all of its value, and could adversely affect the price of the Shares or the ability of the Trust to operate.

Furthermore, a hard fork can lead to new security concerns. For example, when the Ethereum and Ethereum Classic networks split in July 2016, replay attacks, in which transactions from one network were rebroadcast to nefarious effect on the other network, plagued digital assets exchanges through at least October 2016. A digital assets exchange announced in July 2016 that it had lost 40,000 Ether Classic, worth about \$100,000 at that time, as a result of replay attacks. Similar replay attack concerns occurred in connection with the Bitcoin Cash and Bitcoin Satoshi’s Vision networks split in November 2018. In November 2016, the Ethereum network underwent a hard fork, Spurious Dragon, that was intended to provide some protection against replay attacks. Another possible result of a hard fork is an inherent decrease in the level of security due to significant amounts of mining power remaining on one network or migrating instead to the new forked network. After a hard fork, it may become easier for an individual validator or validator pool’s hashing power to exceed the relevant threshold of the processing power of the network that retained or attracted less mining power, thereby making digital assets that rely on that network, which could include ETH, more susceptible to attack. Any of these events could cause the Ethereum network to be less attractive to potential users, including smart contract and decentralized application developers, or cause a decline in speculative interest, and thereby cause ETH to decline in value, causing a corresponding decrease in the price of the Shares.

In addition to a volitional hard fork, a fork may also occur as a result of an unintentional or unanticipated software flaw in the various versions of otherwise compatible software that users run. Recently, such an accidental fork reportedly occurred in the Go-Ethereum (“Geth”) client, which is a popular Ethereum Client that many nodes use to access the Ethereum network. In November 2020, a bug was discovered in Geth (but not the other Ethereum Clients at the time), and a patch was released that all users of the Geth Client were supposed to download and apply simultaneously. However, not all users of Geth did so, resulting with the non-patched Geth users temporarily running a different version of the Ethereum Blockchain than the patched Geth users and users of other Ethereum Clients. This temporarily created two conflicting versions of the Ethereum Blockchain, causing the non-patched Geth users to be unable to reach consensus with the rest of the users of the Ethereum Blockchain, interrupting their access to the Ethereum network. Ultimately, the problem was reportedly fixed by releasing a new upgraded version of Geth that all users of the Geth client were to promptly download. This reportedly harmonized the conflicting versions and restored synchronization among Geth users, fixing the problem and restoring access to the Ethereum network. In the future, if an accidental or unintentional fork similar to what happened within the Geth client in November 2020 were to reoccur within Geth (or any other major Ethereum Client), or were to happen to the Ethereum network as a whole (instead of being limited to a single Ethereum Client, in this case Geth), such a fork could lead to users and validators losing confidence in the Ethereum network and abandoning it in favor of other blockchain protocols. Furthermore, it is possible that, in a future accidental or unintentional fork, a substantial number of users and validators could adopt an incompatible version of the digital asset while resisting community-led efforts to merge the two chains, resulting in a permanent fork. Moreover, unlike Bitcoin, which has a single widely-accepted reference implementation in Bitcoin Core, after the Merge, nodes on the Ethereum network must run both an Execution Client and a Consensus Client paired together, with the implementations selected at the discretion of the node operator. There are multiple groups independently developing and implementing their respective Execution Clients and Consensus Clients; while some individual Execution Clients or Consensus Clients are more popular or widely adopted than others, there remains heterogeneity among Ethereum Clients. Each Execution Client and Consensus Client needs to interoperate seamlessly with each other Execution Client and Consensus Client. Although this diversity of Ethereum Clients is perceived by some to promote decentralization of the Ethereum network, it comes at a potential cost: if there are any unanticipated or undiscovered flaws, bugs, software defects, or interoperability failures causing any individual Execution Client to fail to interoperate seamlessly with any other individual Execution Client or any Consensus Client, the Ethereum network as a whole could suffer an unexpected hard fork, major disruption, catastrophic outage, system failure, loss of confidence or adoption among users or validators, or a variety of other problems. Any of these events could cause ETH to decline in value, adversely affecting the price of Shares.

The Ethereum network regularly implements volitional hard forks in order to achieve its development roadmap, advance the scalability process, and to improve the network generally. For example, in connection with the Ethereum development roadmap, the Ethereum network executed volitional hard forks to transition from the initial Frontier development stage into the Homestead development stage in 2016; to transition from the Homestead development stage to the first sub-stage, Byzantium, of the Metropolis development stage in 2017; to transition from the Byzantium sub-stage to the St. Petersburg sub-stage in early 2019; and to transition from the St. Petersburg sub-stage to the Istanbul sub-phase, in late 2019. In April 2021, Ethereum underwent the Berlin and Altair hard forks, among others. In 2022, Ethereum underwent the Bellatrix and Paris hard forks (collectively constituting the Merge). In 2023, Ethereum underwent the

Capella and Shanghai hard forks (collectively, “Shapella”), which enabled withdrawals of staked assets to the Layer 1 Ethereum network’s blockchain for the first time (they had previously been locked on the Beacon Chain following the Merge). On May 7, 2025, “Pectra,” which is a combination of the Prague execution layer hard fork and the Electra consensus layer upgrade, went live. Pectra, among other changes, increased the maximum effective balance for a single validator from 32 ETH to 2,048 ETH (EIP-7251), allowing validators to consolidate multiple validators into one, reducing network overhead and operational costs, though potentially affecting the degree of validator decentralization on the network; and introduced a new form of account abstraction (EIP-7702), allowing externally owned accounts (EOAs) to execute smart contract code, enabling programmable wallet features such as transaction bundling, gasless transactions, and custom recovery schemes. In December 2025, the Ethereum network implemented the Fusaka hard fork, which was designed to expand data capacity, reinforce defenses against denial-of-service attacks, and introduce new tools for developers and users, among others. The main feature of the Fusaka upgrade is a new way of handling the data in the blobs introduced by the Dencun upgrade. The Ethereum core developers have announced a further planned upgrade, referred to as “Glamsterdam,” which is expected to be implemented in the second half of 2026. Any of these or future hard forks could fail to work as intended or could introduce bugs, coding defects, unanticipated or undiscovered problems, flaws, or security risks, create problematic economic incentives which incentivize behavior which has a negative effect on the Ethereum network’s users, validators, or the Ethereum network as a whole, or otherwise adversely affect, the speed, security, usability, or value of the Ethereum network or ETH. Alternatively, such hard forks could be contentious, leading to a split and fracture in the Ethereum community to its collective detriment, as discussed above. Any such outcomes could adversely affect the value of the Shares.

Shareholders may not receive the benefits of any forks or “airdrops.”

We refer to the right to receive any benefits arising from a fork, airdrop (defined below), or similar event as an “Incidental Right” and any such virtual currency acquired through an Incidental Right as “IR Virtual Currency.” The only crypto asset to be held by the Trust will be ETH. The Trust has adopted the following procedures to address situations involving any fork, airdrop or similar event that results in the issuance of Incidental Rights or IR Virtual Currency that the Trust may receive. The Trust Agreement stipulates that if a fork occurs, the Sponsor shall determine which asset constitutes ETH and which network constitutes the Ethereum network, and the Sponsor will as soon as possible cause the Trust to irrevocably abandon the Incidental Rights or IR Virtual Currency. Because the Trust will abandon any Incidental Rights and IR Virtual Currency, the Trust would not receive any direct or indirect consideration for the Incidental Rights or IR Virtual Currency and thus the value of the Shares will not reflect the value of the Incidental Rights or IR Virtual Currency. Such Incidental Rights or IR Virtual Currency will not be taken into account for purposes of determining NAV. In the event the Trust seeks to change this position, an application would need to be filed with the SEC by the Exchange seeking approval to amend its listing rules to permit the Trust to distribute the Incidental Rights or IR Virtual Currency that is not ETH in-kind to the Sponsor, as agent for the Shareholders, and the Sponsor would arrange to sell or otherwise dispose of the Incidental Rights or IR Virtual Currency and for the proceeds (if any) to be distributed to the Shareholders. There can be no assurance as to whether or when the Sponsor would make such a decision, or when the Exchange will seek or obtain this approval, if at all.

In addition to forks, a digital asset may become subject to a similar occurrence known as an “airdrop.” In an airdrop, the promoters of a new digital asset announce to holders of another digital asset that such holders will be entitled to claim a certain amount of the new digital asset for free, based on the fact that they hold such other digital asset. Neither the Trust nor the Sponsor shall be under any obligation to claim or attempt to secure or realize any economic benefit from “airdropped” assets, and the Sponsor will cause the Trust to irrevocably and permanently abandon, for no consideration, such Incidental Rights or IR Virtual Currency. In the event the Trust seeks to change this position, an application would need to be filed with the SEC by the Exchange seeking approval to amend its listing rules to permit the Trust to distribute the Incidental Rights or IR Virtual Currency associated with the airdropped assets in-kind to the Sponsor, as agent for the Shareholders, and the Sponsor would arrange to sell or otherwise dispose of the Incidental Rights or IR Virtual Currency and for the proceeds (if any) to be distributed to the Shareholders.

With respect to any fork, airdrop or similar event, the Sponsor will cause the Trust to irrevocably abandon the Incidental Rights and any IR Virtual Currency associated with such event. As such, Shareholders will not receive the benefits of any forks, and the Trust is not able to participate in any airdrop. In the event the Trust seeks to change this position, an application would need to be filed with the SEC by the Exchange seeking approval to amend its listing rules to permit the Trust to change this policy.

Even if required regulatory approval is sought and obtained, Shareholders may not receive the benefits of any forks, airdrops, or similar events, the Trust may not choose, or be able, to participate in an airdrop, and the timing of receiving any benefits from a fork, airdrop or similar event is uncertain. Any inability to recognize the economic benefit of a hard fork or airdrop could adversely affect the value of the Shares.

In the event of a hard fork of the Ethereum network, the Sponsor will, if permitted by the terms of the Trust Agreement, use its discretion to determine which network should be considered the appropriate network for the Trust’s purposes, and in doing so may adversely affect the value of the Shares.

In the event of a hard fork of the Ethereum network, the Sponsor will, if permitted by the terms of the Trust Agreement, use its discretion to determine, in good faith, which peer-to-peer network, among a group of incompatible forks of the Ethereum network, is generally accepted as the Ethereum network and should therefore be considered the appropriate network for the Trust’s purposes. The Sponsor will base its determination on a variety of then relevant factors, including, but not limited to, the Sponsor’s beliefs regarding expectations of the core developers of the Ethereum Network, users, service providers, businesses, miners and other constituencies, as well as the actual continued acceptance of, mining power on, and community engagement with, the Ethereum network. There is no guarantee that the Sponsor will choose the digital asset that is ultimately the most valuable fork, and the Sponsor’s decision may adversely affect the value of the Shares as a result. The Sponsor may also disagree with Shareholders, security vendors and MarketVector on what is generally accepted as ETH and should therefore be considered “ETH” for the Trust’s purposes, which may also adversely affect the value of the Shares as a result.

Digital asset markets in the United States exist in a state of regulatory uncertainty, and adverse legislative or regulatory developments could significantly harm the value of ETH or the Shares, such as by banning, restricting or imposing onerous conditions or prohibitions on the use of ETH, validating activity, digital wallets, the provision of services related to trading and providing custody services for ETH, the operation of the Ethereum network, or the digital asset markets generally

There is a lack of consensus regarding the regulation of digital assets, including ETH, and their markets. As a result of the growth in the size of the digital asset market, as well as the 2022 Events, the U.S. Congress and a number of U.S. federal and state agencies (including FinCEN, SEC, Office of the Comptroller of the Currency (the “OCC”), CFTC, FINRA, the Consumer Financial Protection Bureau (“CFPB”), the Department of Justice, the Department of Homeland Security, the Federal Bureau of Investigation, the Internal Revenue Service (“IRS”), state financial institution regulators, and others) have been examining the operations of digital asset networks, digital asset users and the digital asset markets. Congress is currently considering several bills relating to the regulation of digital assets and stablecoins, which may not pass and be enacted in their present form or at all. Many state and federal agencies have brought enforcement actions or issued consumer advisories regarding the risks posed by digital assets to investors. Ongoing and future regulatory actions with respect to digital assets generally or ETH in particular may alter, perhaps to a materially adverse extent, the nature of an investment in the Shares or the ability of the Trust to continue to operate.

The 2022 Events, including among others the bankruptcy filings of FTX and its subsidiaries, Three Arrows Capital, Celsius Network, Voyager Digital, Genesis, BlockFi and others, and other developments in the digital asset markets, have resulted in calls for heightened scrutiny and regulation of the digital asset industry, with a specific focus on intermediaries such as digital asset exchanges and custodians. Federal and state legislatures and regulatory agencies may introduce and enact new laws and regulations to regulate crypto asset intermediaries, such as digital asset exchanges and custodians. The March 2023 collapses of Silicon Valley Bank, Silvergate Bank, and Signature Bank, which in some cases provided services to the digital asset industry, may amplify and/or accelerate these trends.

U.S. federal and state regulators, as well as the White House, have issued reports and releases concerning crypto assets, including ETH and crypto asset markets. Further, in 2023 the House of Representatives formed two new subcommittees: the Digital Assets, Financial Technology and Inclusion Subcommittee and the Commodity Markets, Digital Assets, and Rural Development Subcommittee, each of which were formed in part to analyze issues concerning crypto assets and demonstrate a legislative intent to develop and consider the adoption of federal legislation designed to address the perceived need for regulation of and concerns surrounding the crypto industry. However, the extent and content of any forthcoming laws and regulations are not yet ascertainable with certainty, and it may not be ascertainable in the near future. The impact of these and other related events on the Trust, the digital asset industry, and the value of the Shares cannot be predicted.

There remains substantial uncertainty regarding the regulation of digital assets, including ETH, and their markets, notwithstanding certain recent federal interpretive actions intended to provide additional clarity. On March 17, 2026, the SEC issued an interpretive release (the “Interpretive Release”) regarding the application of the federal securities laws to certain types of digital assets and certain transactions involving digital assets, and the CFTC concurrently provided guidance that it and its staff will administer the Commodity Exchange Act consistent with that interpretation. Among other things, the Interpretive Release introduces a taxonomy for crypto assets; addresses how a non-security crypto asset may become subject to, and may cease to be subject to, an investment contract; and clarifies the application of the federal securities laws to airdrops, protocol mining, protocol staking and the wrapping of a non-security crypto asset. Although the March 17, 2026 interpretive guidance may provide greater clarity in certain respects, this guidance is not binding law, may be revised, and does not eliminate uncertainty, particularly with respect to the regulatory treatment of specific activities or transactions involving crypto assets. In August 2021, the chair of the SEC stated that he believed investors using digital asset trading

platforms are not adequately protected, and that activities on the platforms can implicate the securities laws, commodities laws and banking laws, raising a number of issues related to protecting investors and consumers, guarding against illicit activity, and ensuring financial stability. The chair expressed a need for the SEC to have additional authorities to prevent transactions, products, and platforms from “falling between regulatory cracks,” as well as for more resources to protect investors in “this growing and volatile sector.” The chair called for federal legislation centering on digital asset trading, lending, and decentralized finance platforms, seeking “additional plenary authority” to write rules for digital asset trading and lending. It is not possible to predict whether, or when, any of these developments will lead to Congress granting additional authorities to the CFTC, SEC or other regulators, what the nature of such additional authorities might be, how additional legislation and/or regulatory oversight might impact the ability of digital asset markets to function or how any new regulations or changes to existing regulations might impact the value of digital assets generally and ETH held by the Trust specifically. The consequences of increased federal regulation of digital assets and digital asset activities could have a material adverse effect on the Trust and the Shares.

FinCEN requires any administrator or exchanger of convertible virtual currency (“CVC”) to register with FinCEN as a money transmitter and comply with the anti- money laundering regulations applicable to money transmitters. Entities which fail to comply with such regulations are subject to fines, may be required to cease operations, and could have potential criminal liability. For example, in 2015, FinCEN assessed a \$700,000 fine against a sponsor of a digital asset for violating several requirements of the Bank Secrecy Act by acting as an MSB and selling the digital asset without registering with FinCEN, and by failing to implement and maintain an adequate anti-money laundering program. In 2017, FinCEN assessed a \$110,000,000 fine against BTC-e, a now defunct digital asset exchange, for similar violations. The requirement that exchangers that do business in the United States register with FinCEN and comply with anti- money laundering regulations may increase the cost of buying and selling ETH and therefore may adversely affect the price of ETH and an investment in the Shares.

The Office of Foreign Assets Control (“OFAC”) of the U.S. Department of the Treasury (the “U.S. Treasury Department”) has added digital currency addresses, including addresses on the Ethereum Blockchain, to the list of Specially Designated Nationals whose assets are blocked, and with whom U.S. persons are generally prohibited from dealing. Such actions by OFAC, or by similar organizations in other jurisdictions, may introduce uncertainty in the market as to whether ETH that has been associated with such addresses in the past can be easily sold. This “tainted” ETH may trade at a substantial discount to untainted ETH. Reduced fungibility in the ETH markets may reduce the liquidity of ETH and therefore adversely affect their price.

In February 2020, then-U.S. Treasury Secretary Steven Mnuchin stated that digital assets were a “crucial area” on which the U.S. Treasury Department has spent significant time. Secretary Mnuchin announced that the U.S. Treasury Department is preparing significant new regulations governing digital asset activities to address concerns regarding the potential use for facilitating money laundering and other illicit activities. In December 2020, FinCEN, a bureau within the U.S. Treasury Department, proposed a rule that would require financial institutions to submit reports, keep records, and verify the identity of customers for certain transactions to or from so-called “unhosted” wallets, also commonly referred to as self-hosted wallets. In January 2021, then U.S. Treasury Secretary nominee Janet Yellen stated her belief that regulators should “look closely at how to encourage the use of digital assets for legitimate activities while curtailing their use for malign and illegal activities.”

Under regulations from the New York State Department of Financial Services (“NYDFS”), businesses involved in digital asset business activity for third parties in or involving New York, excluding merchants and consumers, must apply for a license, commonly known as a BitLicense, from the NYDFS and must comply with anti-money laundering, cybersecurity, consumer protection, and financial and reporting requirements, among others. As an alternative to a BitLicense, a firm can apply for a charter to become a limited purpose trust company under New York law qualified to engage in certain digital asset business activities. Other states have considered or approved digital asset business activity statutes or rules, passing, for example, regulations or guidance indicating that certain digital asset business activities constitute money transmission requiring licensure.

The inconsistency in applying money transmitting licensure requirements to certain businesses may make it more difficult for these businesses to provide services, which may affect consumer adoption of ETH and its price. In an attempt to address these issues, the Uniform Law Commission passed a model law in July 2017, the Uniform Regulation of Virtual Currency Businesses Act, which has many similarities to the BitLicense and features a multistate reciprocity licensure feature, wherein a business licensed in one state could apply for accelerated licensure procedures in other states. It is still unclear, however, how many states, if any, will adopt some or all of the model legislation.

Law enforcement agencies have often relied on the transparency of blockchains to facilitate investigations. However, certain privacy-enhancing features have been, or are expected to be, introduced to a number of digital asset networks. If the Ethereum network were to adopt any of these privacy-enhancing features, these features may provide law enforcement agencies with less visibility into transaction-level data. Europol, the European Union’s law enforcement agency, released a report in October 2017 noting the increased use of

privacy-enhancing digital assets like Zcash and Monero in criminal activity on the internet. In May 2022, OFAC banned all U.S. persons from using Blender.io, a digital asset mixing application that operates on the Ethereum Blockchain to obfuscate the origin, destination and counterparties of blockchain transactions, by adding certain digital asset wallet addresses associated with Blender.io to its Specially Designated Nationals list. Blender.io receives a variety of transactions and mixes them together before transmitting them to their ultimate destinations. On March 23, 2022, Lazarus Group, a state-sponsored cyber hacking group associated with North Korea, carried out a major virtual currency heist from a blockchain project linked to the online game Axie Infinity; Blender.io was used in processing some of the illicit proceeds. The U.S. Treasury Department’s press release announcing the sanctions on Blender.io observed that, while most virtual currency activity is licit, virtual currency can be used for illicit activity, including sanctions evasion, through mixers, peer-to-peer exchangers, darknet markets, and exchanges. This includes the facilitation of heists, ransomware schemes, and other cybercrimes. On October 19, 2023, FinCEN published proposed rulemaking to apply the authorities in Section 311 of the USA PATRIOT Act to impose requirements on financial institutions that engage in CVC transactions with CVC mixers. The proposed rule, if adopted, would require covered financial institutions to report to FinCEN any CVC transactions they process that involves CVC mixing within or involving a jurisdiction outside the United States. The term “CVC mixing” covers more than just transactions that involve CVC mixers like Tornado Cash, and seemingly could cover a broader range of conduct involving technologies, services, or methods that have the effect of obfuscating the source, destination, or amount of a CVC transaction, whether or not the obfuscation was intentional. If the rule were to be adopted as proposed and if the Ethereum Blockchain were to be deemed to or were to adopt features which come within the rule’s ambit, it could cause covered financial institutions - such as many digital asset platforms, or the Trust’s service providers, such as the Cash Custodian - to reduce support for or cease offering services for ETH or to the Trust, which could impair the utility of ETH, the value of the Shares and the Trust’s ability to operate in compliance with new laws and regulations.

A Determination That ETH Or Any Other Digital Asset Is A “Security” May Adversely Affect The Value Of ETH And The Value Of The Shares, And Result In Potentially Extraordinary, Nonrecurring Expenses To, Or Termination Of, The Trust.

Depending on its characteristics, a digital asset may be considered a “security” under the federal securities laws. The test for determining whether a particular digital asset is a “security” is complex and difficult to apply, and the outcome is difficult to predict. The SEC staff has reportedly provided informal assurances in the past to a handful of promoters that their digital assets are not securities. On the other hand, the SEC has brought enforcement actions against the issuers and promoters of several other digital assets on the basis that the digital assets in question are securities. The CFTC has for years considered ETH to be a commodity subject to its regulatory jurisdiction, and ETH futures have been listed for years on CFTC-regulated exchanges while cleared ETH swaps have been listed for trading on CFTC-regulated swap execution facilities not registered with the SEC without being deemed “mixed swaps” subject to joint CFTC and SEC jurisdiction to the Sponsor’s knowledge.

Whether a digital asset is a security under the federal securities laws depends on whether it is included in the lists of instruments making up the definition of “security” in the 1933 Act, the Exchange Act and the Investment Company Act. Digital assets as such do not appear in any of these lists, although each list includes the terms “investment contract” and “note,” and the SEC has typically analyzed whether a particular digital asset is a security by reference to whether it meets the tests developed by the federal courts interpreting these terms, known as the Howey and Reves tests, respectively. For many digital assets, whether or not the Howey or Reves tests are met is difficult to resolve definitively, and substantial legal arguments can often be made both in favor of and against a particular digital asset qualifying as a security under one or both of the Howey and Reves tests. Adding to the complexity, the SEC staff has indicated that the security status of a particular digital asset can change over time as the relevant facts evolve.

In the Interpretive Release, the SEC stated that, based on its current understanding of the digital asset markets, ETH is a “digital commodity” and not itself a security. Although the Interpretive Release represents the official position of the SEC, it is not itself a statute or binding rule, does not supersede or replace the Howey test, is based on the SEC’s current understanding of the digital asset markets, and may be refined, revised or expanded. In addition, a court, regulator, or future administration could take a different view, and future legislation, rulemaking, enforcement positions, judicial decisions or other developments could result in ETH, the Trust, the Shares or transactions involving ETH being treated differently than contemplated by the Interpretive Release. Any such developments could adversely affect the Trust and the value of the Shares.

As part of determining whether ETH is a security for purposes of the federal securities laws, the Sponsor takes into account a number of factors, including the various definitions of “security” under the federal securities laws and federal court decisions interpreting elements of these definitions, such as the U.S. Supreme Court’s decisions in the Howey and Reves cases, as well as reports, orders, press releases, public statements and speeches by the SEC and its staff providing guidance on when a digital asset may be a security for purposes of the federal securities laws, and other materials relevant to the status of ETH as a security (or not). Finally, the Sponsor discusses the security status of ETH with its securities lawyers. Through this process the Sponsor believes that it is applying the proper legal standards in making a good faith determination that it believes ETH is not presently a security under federal law in light of the uncertainties inherent in the Howey and Reves tests. In light of these uncertainties and the fact-based nature of the analysis, the Sponsor acknowledges that ETH may currently be a security, based on the facts as they exist today, or may in the future be found by

the SEC or a federal court to be a security under the federal securities laws notwithstanding the Sponsor’s prior conclusion; and the Sponsor’s prior conclusion, even if reasonable under the circumstances and made in good faith, would not preclude legal or regulatory action based on the presence of a security.

The Sponsor may dissolve the Trust if the Sponsor determines ETH is a security under the federal securities laws, whether that determination is initially made by the Sponsor itself, or because the SEC or a federal court subsequently makes that determination. Because the legal tests for determining whether a digital asset is or is not a security often leave room for interpretation, for so long as the Sponsor believes there to be good faith grounds to conclude that the Trust’s ETH is not a security, the Sponsor does not intend to dissolve the Trust on the basis that ETH could at some future point be determined to be a security.

Any enforcement action by the SEC or a state securities regulator asserting that ETH is a security, or a court decision to that effect would be expected to have an immediate material adverse impact on the trading value of ETH, as well as the Shares. This is because the business models behind most digital assets are incompatible with regulations applying to transactions in securities. The New York Attorney General alleged in a lawsuit filed in March 2023 that ETH was a security under New York and federal securities law and that a cryptocurrency exchange that deals in ETH, unlawfully failed to register as a securities dealer under New York state law. However, the New York Attorney General alleged in the alternative in the same case that ETH was a commodity under both New York state and federal law. The defendant settled the New York Attorney General’s lawsuit without a court adjudicating whether ETH was a security, a commodity, or neither for purposes of New York state or federal law.

If a digital asset is determined or asserted to be a security, it is likely to become difficult or impossible for the digital asset to be traded, cleared or custodied in the United States through the same channels used by non-security digital assets, which in addition to materially and adversely affecting the trading value of the digital asset is likely to significantly impact its liquidity and market participants’ ability to convert the digital asset into U.S. dollars. For example, in 2020 the SEC filed a complaint against the issuer of XRP, Ripple Labs, Inc., and two of its executives, alleging that they raised more than \$1.3 billion through XRP sales that should have been registered under the federal securities laws, but were not. In the years prior to the SEC’s action, XRP’s market capitalization at times reached over \$140 billion. However, in the weeks following the SEC’s complaint, XRP’s market capitalization fell to less than \$10 billion, which was less than half of its market capitalization in the days prior to the complaint. Although the SEC and Ripple reached a settlement in August 2025 to resolve the enforcement action and to dismiss their respective court appeals, which has largely been viewed as positive in the digital assets market, there remains continued uncertainty as to the regulatory framework that will be applied by the SEC and courts to digital assets. The SEC’s action against XRP’s issuer underscores the continuing uncertainty around which digital assets are securities, and demonstrates that such factors as how long a digital asset has been in existence, how widely held it is, how large its market capitalization is and that it has actual usefulness in commercial transactions, ultimately may have no bearing on whether the SEC or a court will find it to be a security. There is currently legislation that is being proposed and considered that addresses this regulatory uncertainty, but it is unclear if the proposed legislation will be passed.

In addition, if ETH is determined to be a security, the Trust could be considered an unregistered “investment company” under SEC rules, which could necessitate the Trust’s liquidation. In this case, the Trust and the Sponsor may be deemed to have participated in an illegal offering of securities and there is no guarantee that the Sponsor will be able to register the Trust under the Investment Company Act at such time or take such other actions as may be necessary to ensure the Trust’s activities comply with applicable law, which could force the Sponsor to liquidate the Trust.

Moreover, whether or not the Sponsor or the Trust were subject to additional regulatory requirements as a result of any SEC or federal court determination that its assets include securities, the Sponsor may nevertheless decide to terminate the Trust, in order, if possible, to liquidate the Trust’s assets while a liquid market still exists. For example, in response to the SEC’s action against the issuer of XRP, certain significant market participants announced they would no longer support XRP and announced measures, including the delisting of XRP from major digital asset trading platforms. The sponsor of the Grayscale XRP Trust subsequently dissolved this trust and liquidated its assets. If the SEC or a federal court were to determine that ETH is a security, it is likely that the value of the Shares of the Trust would decline significantly, and that the Trust itself may be terminated and, if practical, its assets liquidated.

Future Legal Or Regulatory Developments May Negatively Affect The Value Of ETH Or Require The Trust Or The Sponsor To Become Registered With The SEC Or CFTC, Which May Cause The Trust To Liquidate.

Current and future legislation, SEC and CFTC rulemaking, and other regulatory developments may impact the manner in which ETH are treated for classification and clearing purposes. In particular, although the Interpretive Release classified ETH as a digital commodity and not a security under the federal securities laws, ETH may nonetheless in the future be classified by the CFTC as a “commodity interest” under the CEA. Alternatively, in the future a court or a future SEC administration could conclude that ETH is a “security” under U.S. federal securities laws. The Sponsor and the Trust cannot be certain as to how future regulatory developments will impact the treatment of ETH under the law. In the face of such developments, the required registrations and compliance steps may result in

extraordinary, nonrecurring expenses to the Trust. If the Sponsor decides to terminate the Trust in response to the changed regulatory circumstances, the Trust may be dissolved or liquidated at a time that is disadvantageous to Shareholders.

The SEC has stated that certain digital assets may be considered “securities” under the federal securities laws. The test for determining whether a particular digital asset is a “security” is complex and the outcome is difficult to predict. If ETH is in the future determined to be a “security” under federal or state securities laws by the SEC or any other agency, or in a proceeding in a court of law or otherwise, it would likely have material adverse consequences for the value of ETH. For example, it may become more difficult or impossible for ETH to be traded, cleared and custodied in the United States as compared to other digital assets that are not considered to be securities, which could in turn negatively affect the liquidity and general acceptance of ETH and cause users to migrate to other digital assets.

To the extent that ETH is determined to be a security, the Trust and the Sponsor may also be subject to additional regulatory requirements, including under the 1940 Act, and the Sponsor may be required to register as an investment adviser under the Investment Advisers Act of 1940, as amended (the “Advisers Act”). If the Sponsor determines not to comply with such additional regulatory and registration requirements, the Sponsor will terminate the Trust. Any such termination could result in the liquidation of the Trust’s ETH at a time that is disadvantageous to Shareholders.

To the extent that ETH is deemed to fall within the definition of a “commodity interest” under the CEA, the Trust and the Sponsor may be subject to additional regulation under the CEA and CFTC regulations. These additional requirements may result in extraordinary, recurring and/or nonrecurring expenses of the Trust, thereby materially and adversely impacting the Shares. If the Sponsor and/or the Trust determines not to comply with such additional regulatory and registration requirements, the Sponsor may terminate the Trust. Any such termination could result in the liquidation of the Trust’s ETH at a time that is disadvantageous to Shareholders.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

- a) None.
- b) Not applicable.
- c) 325,000 Shares (13 Baskets) were redeemed during the quarter ended June 30, 2026.

Period	Total Number of Shares Redeemed	Average Per Share
04/01/26 to 04/30/26	0	\$ 0
05/01/26 to 05/31/26	100,000	33.38
06/01/26 to 06/30/26	225,000	24.95
Total	325,000	\$ 27.55

Item 3. Defaults Upon Senior Securities.

None.

Item 4. Mine Safety Disclosures.

Not applicable.

Item 5. Other Information.

Not applicable.

Item 6. Exhibits.

See the Exhibit Index below, which is incorporated by reference herein.

EXHIBIT INDEX

<u>Exhibit No.</u>	<u>Exhibit Description</u>
3.1	<u>Certificate of Trust incorporated by reference to Exhibit 3.2 of the Registration Statement on Form S-1 filed by the Registrant on May 7, 2021</u>
3.2	<u>Certificate of Amendment incorporated by reference to Exhibit 3.2 of the Registration Statement on Form S-1 filed by the Registrant on July 8, 2024</u>
4.1	<u>Second Amended and Restated Declaration of Trust and Trust Agreement incorporated by reference to Exhibit 4.1 of the Registration Statement on Form S-1 filed by the Registrant on July 8, 2024</u>
10.1	<u>Form of Initial Authorized Participant Agreement incorporated by reference to Exhibit 10.1 of the report on Form 8-K filed by the Registrant on November 20, 2025</u>
10.2	<u>Marketing Agent Agreement incorporated by reference to Exhibit 10.3 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.3	<u>Custodial Services Agreement incorporated by reference to Exhibit 10.4 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.4	<u>Trust Administration and Accounting Agreement incorporated by reference to Exhibit 10.5 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.5	<u>Transfer Agency Agreement incorporated by reference to Exhibit 10.6 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.6	<u>Index Sub-Licensing Agreement incorporated by reference to Exhibit 10.7 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.7	<u>Cash Custody Agreement incorporated by reference to Exhibit 10.8 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.8	<u>Subscription Agreement incorporated by reference to Exhibit 10.9 of the Registration Statement on Form S-1 filed by the Registrant on May 23, 2024</u>
10.9	<u>Clearing Agreement incorporated by reference to Exhibit 10.9 of the Registration Statement on Form S-1 filed by the Registrant on May 31, 2024</u>
10.10	<u>Additional ETH Custodian Agreement incorporated by reference to Exhibit 10.10 of the Registration Statement on Form S-1 filed by the Registrant on June 21, 2024</u>

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the registrant has duly caused this Report to be signed on its behalf by the undersigned in the capacities* indicated thereunto duly authorized.

VANECK DIGITAL ASSETS, LLC
Sponsor of VanEck Ethereum ETF

By: /s/ Jan F. van Eck*
Jan F. van Eck
President and Chief Executive Officer
(Principal Executive Officer)

By: /s/ John J. Crimmins*
John J. Crimmins
Vice President, Chief Financial Officer and Treasurer
(Principal Financial Officer and Principal Accounting Officer)

Date: August 13, 2026

* The Registrant is a trust and the persons are signing in their capacities as officers of VanEck Digital Assets, LLC, the Sponsor of the Registrant.

Certification of Principal Executive Officer Pursuant to Rule 13a-14(a) and 15d- 14(a) Under the Securities Exchange Act of 1934, as Amended

I, Jan F. van Eck, certify that:

1. I have reviewed this report on Form 10-Q of VanEck Ethereum ETF (the “Trust”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations of the registrant as of, and for, the periods presented in this report;
4. The registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and
5. The registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant’s auditors and the audit committee of the board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant’s ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant’s internal control over financial reporting.
