

Exclude Financials without Sacrificing Yield

PFXF[®] VanEck Vectors[®] Preferred Securities ex Financials ETF

Preferred securities are hybrids of stocks and bonds that can be attractive to investors seeking income and capital appreciation. Removing financial companies from the preferreds universe has historically offered greater yield and diversification.

Diversified Preferreds Exposure

Attractive Yield¹

High Yield Corporate Bonds	5.52%
Ex-Financial Preferreds	5.39%
Broad Preferreds	4.92%
High Grade Corporate Bonds	2.29%
10-Year U.S. Treasury	1.60%
Equities	1.35%

¹Source: Ice Data Indices, FactSet. Data as of 6/30/2021. Yields presented are current yields (ratio of annual interest payment and the security's current price), except for Equities' dividend yield (dividend per share, divided by the price per share). See reverse side for Fund performance, index descriptions and important disclosures.

High Income Potential

Historically, a company's preferred securities have offered higher yield than its common stock and senior debt.

Differentiated Exposure

Index excludes financial companies, which often dominate broad-based indices, resulting in greater diversification without sacrificing yield.

Low Expense Ratio

PFXF's net expense ratio is 59% less than the mutual fund and ETF category average.²

²Net expense ratio was 59% lower than average industry net expense ratio of 1.00%. Industry average based on ETFs and mutual funds in the Morningstar Preferred Stock category, average excludes PFXF.

Performance data quoted represents past performance which is no guarantee of future results and which may be lower or higher than current performance. Performance current to the most recent month end available by calling 800.826.2333 or by visiting vaneck.com. Investment returns and ETF share values will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. ETF returns assume that dividends and capital gains distributions have been reinvested in the Fund at NAV.

The "Net Asset Value" (NAV) of a VanEck Vectors Exchange Traded Fund (ETF) is determined at the close of each business day, and represents the dollar value of one share of the fund; it is calculated by taking the total assets of the fund, subtracting total liabilities, and dividing by the total number of shares outstanding. The NAV is not necessarily the same as the ETF's intraday trading value. VanEck Vectors ETF investors should not expect to buy or sell shares at NAV.

DEFINITIONS: 30-Day SEC Yield is a standard yield calculation developed by the Securities and Exchange Commission that allows for fairer comparisons primarily among bond funds. It is based on the most recent 30-day period. This yield figure reflects the interest earned during the period after deducting the fund's expenses for the period.
