

The All-in-One ETF.

October 2026

VanEck Wealth Builder ETF **WBMO**

Global stocks, bonds, real assets and digital assets in a single, actively managed ETF. VanEck handles the selection, the allocation and the rebalancing.

	Equities	Global developed and emerging market equity across size and style, plus targeted exposure to moat, semiconductor and defense leaders.
	Fixed Income	Treasuries across the curve alongside fallen angels, floating rate, CLO and emerging market credit.
	Real Assets	Gold, natural resources, energy income, infrastructure and uranium, exposure that behaves differently when prices rise.
	Digital Assets	A measured bitcoin allocation, sized so it can contribute without determining the outcome.

Why Invest in WBMO?

- **All-in-one ETF simplicity:** Own a broad mix of investments across stocks, bonds, gold, and bitcoin with a single ETF purchase.
- **Invested in long-term themes:** Exposure to technology, natural resources, and infrastructure, including transformative areas like semiconductors and quantum computing.
- **Actively managed for you:** VanEck selects the investments and adjusts the mix over time, so you don't have to manage each piece yourself.

Structural Themes, Sized Deliberately

Technological Disruption

Chips, quantum and the companies supplying the AI build-out.

Real Assets

Gold, resources, energy infrastructure and commodities that move independently of financial assets.

Debasing Mindset

Scarce, non-sovereign assets held on purpose, not as an afterthought.

Income Diversification

Fallen angels, CLOs, floating rate and global income beyond core bonds.

VanEck Wealth Builder ETF (WBMO) is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing, under normal market circumstances, in exchange-traded products (“ETPs”) that provide exposure to equity securities, fixed income securities, and real assets.

Fund Ticker		WBMO	WBMO Total Return (%) as of 10/26/2026		WBMO

			*Returns less than one year are not annualized.		

The performance data quoted represents past performance. Past performance is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance may be lower or higher than performance data quoted. Please call 800.826.2333 or visit vaneck.com for performance current to the most recent month ended.

The “Net Asset Value” (NAV) of a Fund is determined at the close of each business day, and represents the dollar value of one share of the fund it is calculated by taking the total assets of the fund, subtracting total liabilities, and dividing by the total number of shares outstanding. The NAV is not necessarily the same as the ETF’s intraday trading value. Investors should not expect to buy or sell shares at NAV.

An investment in the Fund involves a substantial degree of risk and is not suitable for all investors. Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully various risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

An investment in the Fund may be subject to risks which include, among others, risks related to investing in Underlying ETPs, which may subject the Fund to ETP-related equity securities, foreign securities, ETP-related foreign currency, CLO, credit, interest rate, call, U.S. government securities, U.S. Treasury securities, commodities, digital asset instruments, gold, natural resources companies, MLPs, small-, medium- and large-capitalization companies, derivatives, futures contract, concentration, and BDCs risks, all of which may adversely affect the Fund. The Fund may also be subject to fund of funds, investing in ETPs, market, high portfolio turnover, data, cash transactions, operational, active management, authorized participant concentration, seed investor, new fund, no guarantee of active trading market, trading issues, fund shares trading, premium/discount, liquidity of fund shares, affiliated fund, non-diversified, and subsidiary investment risks. Certain Underlying ETPs and the Subsidiary are not registered under the Investment Company Act of 1940 and do not afford the investor protections of registered funds. Foreign investments are subject to risks, which include changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations, and changes in currency exchange rates which may negatively impact the Fund's returns. Small-, medium- and large-capitalization companies may be subject to elevated risks.

Digital asset instruments may be subject to risks associated with investing in digital asset exchange-traded products (“ETPs”), which include the historical extreme volatility of the digital asset and cryptocurrency market, as well as less regulation and thus fewer investor protections, as these ETPs are not investment companies registered under the Investment Company Act of 1940 (“1940 Act”) or commodity pools for the purposes of the Commodity Exchange Act (“CEA”).

Commodities may be subject to further risks, including derivatives risk and futures contract risk. **This risk may be adversely affected by “negative roll yields” in “contango” markets.** The Fund will “roll” out of one futures contract as the expiration date approaches and into another futures contract with a later expiration date. The “rolling” feature creates the potential for a significant negative effect on the Fund's performance that is independent of the performance of the spot prices of the underlying commodity. The “spot price” of a commodity is the price of that commodity for immediate delivery, as opposed to a futures price, which represents the price for delivery on a specified date in the future. The Fund would be expected to experience negative roll yield if the futures prices tend to be greater than the spot price. A market where futures prices are generally greater than spot prices is referred to as a “contango” market. Therefore, if the futures market for a given commodity is in contango, then the value of a futures contract on that commodity would tend to decline over time (assuming the spot price remains unchanged), because the higher futures price would fall as it converges to the lower spot price by expiration. Extended period of contango may cause significant and sustained losses. Additionally, because of the frequency with which the Fund may roll futures contracts, the impact of contango on Fund performance may be greater than it would have been if the Fund rolled futures contracts less frequently.

Investing involves substantial risk and high volatility, including possible loss of principal. An investor should consider the investment objective, risks, charges and expenses of the Fund carefully before investing. To obtain a prospectus and summary prospectus, which contains this and other information, call 800.826.2333 or visit vaneck.com/etfs. Please read the prospectus and summary prospectus carefully before investing.
